PROVEN BEST DEER REPELLENT ON THE MARKET

BOBBEXTM-R

Try our bulb dip program!

BOBBEXTM-R Animal Repellent

All **BOBBEX** Products...

- Are made from natural recycled ingredients
- Can be applied to ornamentals and flowers
- Are harmless to humans, pets, wildlife, and aquatic life
- Should be sprayed directly on leaf, stem, and flower surfaces

BOBBEX-RTM Deters Rabbits, Groundhogs, Squirrels, Chipmunks, & Voles **

Use **BOBBEX-RTM** to discourage bulb damage from squirrels & other underground herbivores!

Before planting, dip bulbs in straight concentrated BOBBEX-R. Soak for 3-5 minutes and air dry to mask the bulbs' scent.

** BOBBEX-R can be used to deter deer.

PROVEN BEST DEER REPELLENT ON THE MARKET

BOBBEX™ ROSE

Stop and spray the roses!

BOBBEX ROSE™

The continued use of Bobbex Rose Deer and Insect Repellent for Roses™ will reduce damage to rose flowers and leaves by:

- Protecting against the assault of insects
- Disrupting the browsing habits of deer

BOBBEX ROSE™ is the first line of defense in rose protection.

BOBBEX ROSE

- Will not wash off
- Repels Japanese Beetles, aphids, mites, leafhoppers, greenflies, and sawflies
- Reduces Powdery Mildew and Black Spot
- Reduces the need for harsher insecticides, fungicides, and pesticides

BOBBEX ROSE™ is a must have product for all rose lovers. This multi-purpose spray is the 1st line of defense against insect damage on flowers and leaves, and the #1 choice in deer repellents. This spray deters deer using similar ingredients found in Bobbex Deer Repellent™, which has repelled all types of deer for decades. The essential oils used in BOBBEX ROSE™ are proven to be effective in deterring the impact of Japanese Beetles – a persistent problem for rose growers. Our unique ingredients disrupt their neural systems and cause them to quickly drop off the plant. Our other ingredients keep these oils in place long after application and through several rains.

BOBBEX ROSE™ is environmentally friendly and meets the high standards of our company that our customers have come to know. Our strategy is to use environmentally friendly ingredients that both naturally protect and enhance rose bushes while repelling unwanted pests. We have balanced repelling ingredients with more aromatic oils to offer a product where treated flowers can be brought into the home soon after spraying.

PROVEN BEST DEER REPELLENT ON THE MARKET

Bobbex builds high customer loyalty and repeat sales.

Here is what some of our customers say...

Thank you! This is an excellent product. We've been in a drought, and the deer are attracted to my roses, etc. because they're still green. Thanks to BOBBEX, I have been able to enjoy my roses and flowers this summer. J.T., Rome, GA

Thanks! Your product has worked great with our "Louisiana" Deer and Rabbit. J.K., Ruston, LA

The Bobbex product works better than all others that I have tried to keep the varmints out of my vegetable garden. It is a great product that I would recommend to anyone. A.B., Lakeville, MA

Thanks ever so much. Bobbex has brought our garden back to life. R.M., Ashland, OR

Frequently Asked Questions

When should Bobbex be applied?

Bobbex can be and should be used all year in both dormant times and periods of rapid growth. Also, new growth is unprotected growth. Spray newly sprouted area as needed.

What should Bobbex be used on?

Bobbex can be used on all types of ornamental trees, shrubs, bulbs, and flowers.

Can Bobbex Products save homeowners money?

Yes! Systematic use of Bobbex products will ensure that expensive planting will not need to be replaced after severe browsing.

Will Bobbex products freeze?

Yes, Bobbex products will freeze, however upon thawing they can still be used.

PROVEN BEST DEER REPELLENT ON THE MARKET

Independent Study *PROVES* BOBBEX™ Works Best at Repelling Deer

An independent study was conducted by the State of Connecticut, Department of Forestry and Horticulture, to test the effectiveness of deer repellents.

10 different commercially available repellents were tested.

A summary of the study is as follows:

Effectiveness of Deer Repellents*

INTRODUCTION: 10 different commercially available repellents at 2 different locations in Connecticut were tested. The study included both positive (fence) and negative (no treatment) controls. Yews (evergreens) were planted in 2 blocks at each location in the Spring of 2006; each block had 12 groups of 6 yews. One of the 12 treatments was randomly assigned to each group of yews within each block. Repellents were applied based on manufacturers' label recommendations for the 2006 and 2007 growing seasons and application costs were recorded. A Protection Index was derived based on plant size and dry needle weights at the end of the 2007 growing season.

**BOBBEX Proven Best with a
93% Protective Index Rating!**

RESULTS:

As noted by the **Protective Index (%)** in the table below, **BOBBEX** scored a 93% and was ranked higher than any other brand tested. Only a physical fence worked better!
