-------------------------------------	------------

**AT BERGER,
WE GO BEYOND
ROOFING DRAINAGE.**

BERGER®

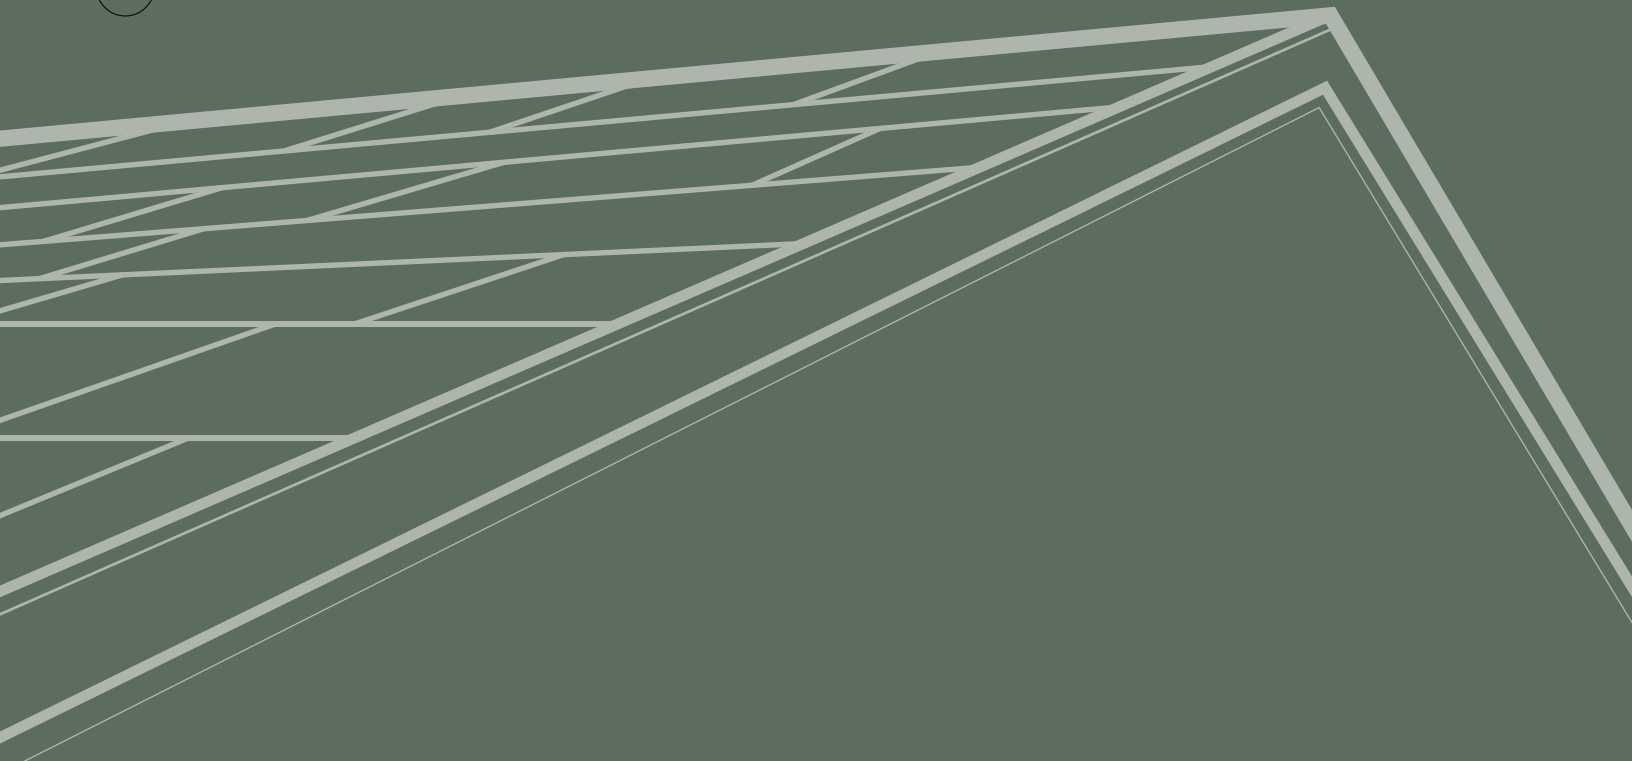

From roofing products to siding accessories,
we're your trusted manufacturer for topnotch
building products.

PROVIDING BUILDING PRODUCTS SINCE 1874

BUILDING QUALITY PRODUCTS SINCE 1874

For 150 years, Berger has remained the go-to supplier of building products for customers like you.

BERGER®

ROOFING ACCESSORIES

drip & roof edges • drip, window & door caps • flashing

ROOFING ACCESSORIES

Berger has the contractor-grade edging and flashing products you need. Choose from 40+ profiles in top materials like copper, aluminum and steel. Painted or with a mill finish, there’s a style that works for every project.

- Protects against water infiltration
- Available in painted aluminum, mill finish aluminum, copper, galvanized steel and painted steel
- Offered in a wide variety of profiles

DRIP & ROOF EDGES

MATERIALS & PACKAGING:

ALUMINUM

COPPER

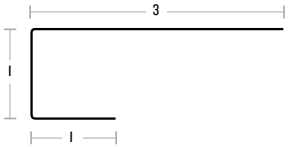

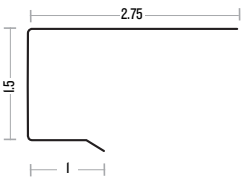

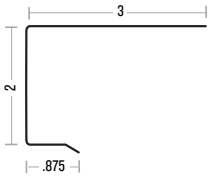

STEEL

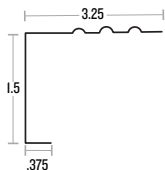

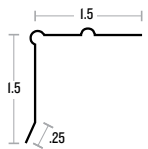

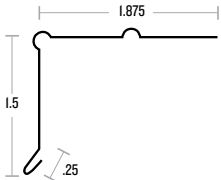

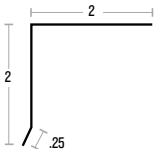

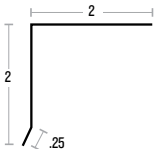

All drip and roof edges are 10’ long.

All thicknesses and dimensions are nominal.

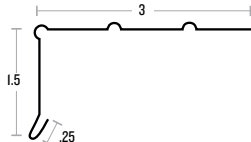

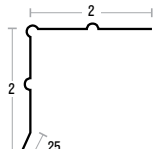

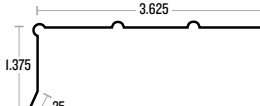

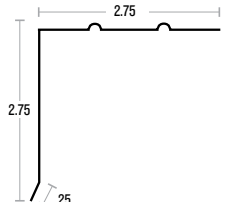

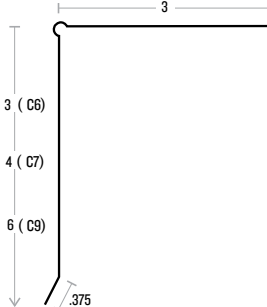

All drip and roof edge are sold in full carton quantities only.

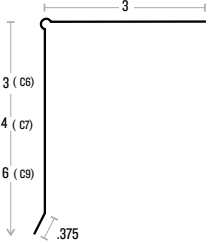

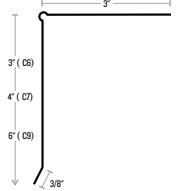

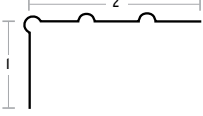

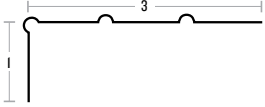

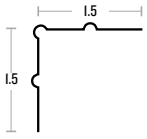

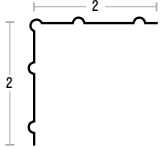

For proper ordering, enter color code (• •). For example: A-5 • • B filled out as A-5WAB would be an aluminum A5 Roof Edge, 0.019 thickness and 10’ long, painted white.

150 YEARS OF BUILDING PRODUCTS KNOWLEDGE

150 YEARS OF BUILDING PRODUCTS KNOWLEDGE

Berger has provided products and knowledge for customers since 1874.

BERGER®

ROOF DRAINAGE SOLUTIONS

k-style gutters • half-round gutters • downspouts • elbows • offsets
miters • end caps • k-style hangers • half-round hangers • end pieces & slip
joints • outlets & conductor heads • pipe fasteners & accessories
euracraft • gutter coils

ROOF DRAINAGE SOLUTIONS

Proper roof drainage is the best way to protect your client’s home and foundation from damaging water runoff. From high-end gutter systems in styles they’ll love to gutter trim, Berger has what you need. Choose from a variety of colors and materials like aluminum, steel and copper.

- Available in painted aluminum, copper, painted steel, galvanized steel and paint grip steel
- Gutter and accessories to fit most needs
- Offered in a variety of popular colors

GUTTERS: K-STYLE GUTTERS

MATERIALS & PACKAGING:

ALUMINUM

COPPER

STEEL

All thicknesses and dimensions are nominal.

Gutters are available in standard 10', 20' and 30' lengths. Contact Customer Care for nonstandard lengths.

For proper ordering, enter length code (_ _) and color code (• •). For example: K_ _ • • 5 filled out as K10BR5 would be a 5" Aluminum Painted Brown 10' hemback K-style gutter.

Partial carton quantities available for gutter products, additional fee applies.

Note: FreedomGray™ is copper-coated with a unique, patented tin-zinc alloy. It offers all the advantages of copper in a naturally weathering earth tone gray color.

GUTTER ACCESSORIES: OFFSETS

MATERIALS & PACKAGING:

ALUMINUM

COPPER

STEEL

All thicknesses and dimensions are nominal.

For proper ordering, enter length code (_ _) and color code (• •). For example: K_ _ • • 5 filled out as K10BR5 would be a 5" Aluminum Painted Brown 10' hemback K-style gutter.

Partial carton quantities available for gutter products, additional fee applies.

Note: FreedomGray™ is copper-coated with a unique, patented tin-zinc alloy. It offers all the advantages of copper in a naturally weathering earth tone gray color.

GUTTER ACCESSORIES: PIPE FASTENERS & ACCESSORIES

MATERIALS & PACKAGING:

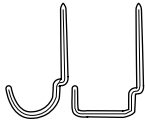

- ALUMINUM
- COPPER
- STEEL
- BRONZE
- IRON
- ZINC

All thicknesses and dimensions are nominal.

For proper ordering, enter length code (_ _) and color code (• •). For example: K_ _ • • 5 filled out as K10BR5 would be a 5" Aluminum Painted Brown 10' hemback K-style gutter.

Partial carton quantities available for gutter products, additional fee applies.

Note: FreedomGray™ is copper-coated with a unique, patented tin-zinc alloy. It offers all the advantages of copper in a naturally weathering earth tone gray color.

QUALITY PRODUCTS SINCE 1874

PROVIDING CUSTOMERS WITH QUALITY PRODUCTS

Berger strives to provide customers with quality products and support.

BERGER®

GUTTER PROTECTION

gutter guards • rainwater diversion

GUTTER PROTECTION

Berger offers a large selection of gutter protection systems that help eliminate clogged gutters and downspouts. Gutter guards and covers are available for use with K-style and Half-Round gutters. Styles include drop-in, hinged, lock-on and snap-in models.

- Available in painted aluminum, copper, painted steel, galvanized steel, paint grip steel and PVC
- Installs on new or existing gutter systems

GUTTER GUARDS

MATERIALS & PACKAGING:

ALUMINUM

COPPER

STEEL

PVC

All thicknesses and dimensions are nominal.

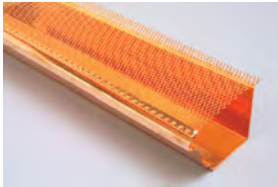

For proper ordering, enter length code (_ _) and color code (• •). For example: K_ _ • • 5 filled out as K10BR5 would be a 5" Aluminum Painted Brown 10' hemback K-style gutter.

Note: FreedomGray™ is copper-coated with a unique, patented tin-zinc alloy. It offers all the advantages of copper in a naturally weathering earth tone gray color.

PROVIDING PRODUCTS SINCE 1874

SUPPORTING OUR CUSTOMERS SINCE 1874

Berger has been supporting our customers since 1874 with quality and reliable products.

BERGER®

SNOW RETENTION SYSTEMS

snow guards • mullane snow guards • snow rail systems

SNOW RETENTION SYSTEMS

Berger offers the most extensive selection of snow guards for any type of residential or commercial roof, including metal, slate, shingle and cedar. They are designed to reduce large sheets of snow and ice from avalanching off a sloped roof and causing extensive damage to property and pedestrians.

- Helps avoid costly insurance claims due to avalanching snow and ice
- Minimizes ice damming at roof's edge
- Reduces damage to gutters

150 YEARS OF BUILDING QUALITY PRODUCTS

BUILDING QUALITY PRODUCTS SINCE 1874

For 150 years, Berger has remained the go-to supplier of building products for customers like you.

What's our secret? We have three: We keep your needs top-of-mind, keep innovating and never skimp on materials. Copper, aluminum, and steel are our bread and butter — because you deserve the very best.

BERGER®

TECHNICAL REFERENCE APPENDIX

APPENDIX

WARRANTY

Berger requires that all materials be evaluated for fitness use by the user prior to application. Berger will not be responsible for misapplication of product, incorrect material or defects that were obvious at time of installation, consequential damage, schedule delays, labor and equipment rental. Our warranty is limited to our cost of materials on product determined to be a manufactured defect. Claims for defective material damaged due to snow and / or ice loads are not covered by our warranty unless Berger snow guards have been utilized and installed per our installation instructions.

For further information on proper use of these products, please review this Technical Reference Appendix, the SMACNA Architectural Sheet Metal Manual 5th Edition or the AIA Architectural Graphic Standards 6th Edition. The information included in this Appendix has been derived for the SMACNA Architectural Sheet Metal Manual 5th Edition and the AIA Architectural Graphic Standards 6th Edition. For full copies of these industry manuals, please contact:

Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)

PATINA CHEMICAL SOURCES

Copper will patina naturally in most areas within 7 years when exposed to normal air quality and moisture. Areas that are dry or at high altitudes will take longer or not react to environmental surface oxidation. Berger Building Products, Inc. provides this information as a service with the understanding that the results of the chemical patina will vary, and Berger assumes no liability. Berger cautions the user that the user is responsible for the results. The user must also comply with all manufacturer safety recommendations on handling and disposing of chemicals in accordance with all Local, State and Federal EPA Guidelines. User can check for other sources on the internet, phone and industrial directories.

Triple-S Chemical Products, Inc. — Los Angeles

(800) 862-5958

Patina Solutions (800) 882-7004

Jax Chemical So. — Floral Park, NY (718) 347-0057

The Copper Development Association (CDA) provides information on the use of copper for every purpose known to man at the website <http://www.copper.org>. For specific information on architectural copper finishes, go to <http://www.copper.org/applications/architecture/finishes.html>.

STORAGE & HANDLING OF PRODUCTS

Berger products must be stored in a properly ventilated, dry environment to prevent condensation on metal surfaces. Materials that are stored in areas subject to temperature variations, outside storage or subjected to moisture damage are not returnable. Galvanized Steel and Zinc surfaces are susceptible to humid storage stain or white rust. SMACNA Guidelines for storage and handling of materials apply. Refer to SMACNA Appendix A-5 Sections 1.7, 1.8 and 1.9.

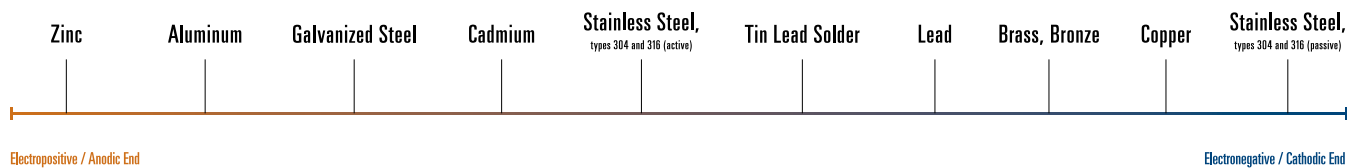

CAUTION: Use of aluminum with some dissimilar materials or corrosive environment will result in corrosion and failure of the material.

Aluminum may react and corrode when contacted with runoff water from copper flashings, copper roofing, shingles containing copper antifungal agents, or pressure-treated wood containing CCA or ACQ or copper-azole. Do not permit direct contact use with dissimilar metals or alkaline materials such as concrete, mortar, stucco or cementitious fiber board materials.

GALVANIC CORROSION

The selection of gutter material must account for the potential of Galvanic or Electrolytic Corrosion at contact points with other metals and at supports. Also, special selection is required for corrosive environments such as coastal or polluted industrial atmospheres. Galvanic or Electrolytic Corrosion can occur when dissimilar metal are in contact in the presence of an electrolyte. An electrolyte is any nonmetal substance that will conduct an electric current, especially a liquid solution. Water, particularly rainwater, is a good electrolyte.

GALVANIC SCALE

To reduce the tendency for galvanic corrosion to occur between dissimilar metals, one or more of the following actions can be taken:

- Avoid contact between metals that are farther apart on the scale.
- Do not couple a small exposed area of a more electropositive (anodic) metal with a large area of a more electronegative (cathodic) metal. Fasteners are a particular concern in this regard.
- Coat the electropositive (cathodic) metal with a suitable paint or other non-metallic coating (or coat both surfaces at their interface). Zinc chromate or bituminous coatings are often used.
- Separate the metals by tape, gasket, waterproof paper, elastomeric sheet, sealant or other non-absorbent, non-conductive material.
- Do not allow moisture runoff from a more electronegative (cathodic) metal to drain on a more electropositive (anodic) metal, even if the metals are not in contact.
- Remove metal particles that are deposited from steel dies on formed metals (or prevent the deposits from occurring).

Miscellaneous Information about Galvanic Corrosion:

- Passivated stainless steel has been chemically cleaned, usually with an acid solution.
- Anodized aluminum is considered compatible with all other metals.
- Slats increase the electrical conductivity of water.
- The discharge from drain pipes on rooftop air-conditioning units can be very corrosive, particularly if the piping is copper, and the drainage goes into galvanized steel scuppers, conductor heads or gutters.
- Coppers nails / fasteners should not be used for fastening galvanized steel roof panels even though the contact area of the more electropositive (anodic) zinc coating is small compared to the more electronegative (cathodic) copper metal. Galvanized steel nails / fasteners will corrode rapidly if used on copper roofing.
- Many organizations and individuals have published corrosion tables. All of them tend to rank corrosion rates in non-quantitative terms such as mild, moderate and severe. Rates of corrosion are also affected by conditions such as seacoast, dry inland, acid rain and polluted industrial atmospheres.

APPENDIX

GUTTER HANGER SELECTION

In deciding which hanger is most acceptable, please consider such things as appearance, expected life, ice loading, size of gutter, material and expansion. When fascia board is less than 2" thick, the hanger fasteners must be driven into the rafter ends. In area subject to snow slide, coordinate the front edge elevation of the gutter with the extended roof line. (See below table on Required Clearance of Gutter Below Extended Roof Line.)

RECOMMENDED GUTTER HANGER SPACING

Gutter hangers should be spaced at a maximum of 36" on center. In areas where ice and snow are long lasting, hanger spacing should be reduced to 18" on center.

RECOMMENDED GUTTER PITCH & POSITION ON THE EAVE

There are two factors that go into determining gutter positions on the eave: the pitch of the gutter and the roof slope. Gutter should be pitched 1/16" or greater per foot for proper drainage. Gutter can be run level for appearance, but additional downspout will be necessary. (See section on Proper Gutter and Downspout Sizing on the following pages.) Gutters should be placed below the extended roof line so that snow and ice can slide clear. Steeper pitches require less clearance.

REQUIRED CLEARANCE OF GUTTER BELOW EXTENDED ROOF LINE	
0 in 12 - 2 in 12	1"
3 in 12 - 5 in 12	3/4"
6 in 12 - 8 in 12	1/2"
9 in 12 or Greater	1/4"

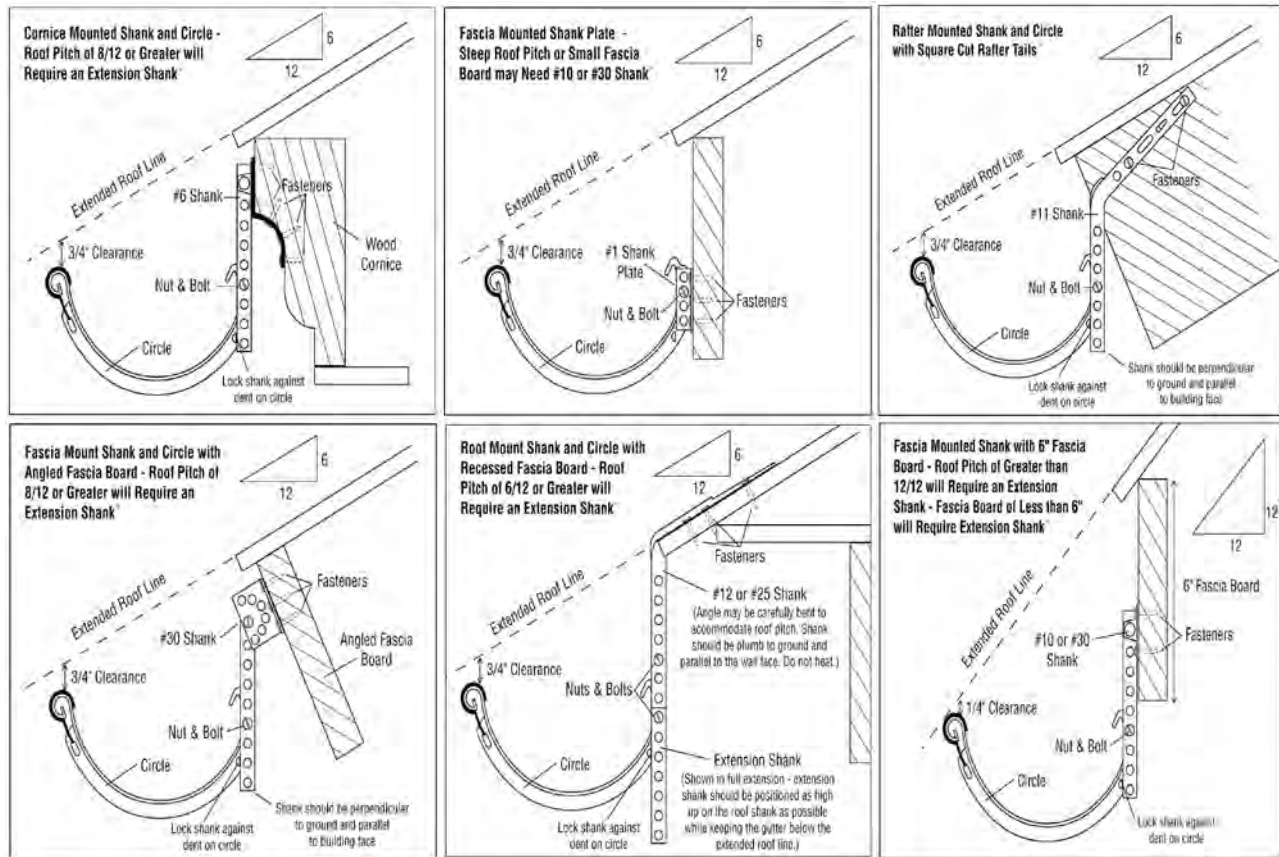

LAP JOINT SPECIFICATION

Joints in gutters must be overlapped 1", riveted on 2" centers and soldered if the metal can be soldered. (See soldering instructions for details.) With metals that cannot be soldered, SeamerMate® Sealant must be continuously applied with a 1" lapped joint, and sealed lap must be riveted on 1" centers.

PENETRATING WALL FASTENERS

Berger recommends drilling holes in masonry and the use of metal hole inserts and / or FlashMate® Sealant when installing these pipe hook fasteners. Wall penetrations need to be sealed to prevent water intrusion and related problems. Driving these into brick mortar joints will cause damage to the pipe hook fasteners and the wall.

TYPICAL GUTTER HANGER DETAILS

*Only 1 hole will line up with bolt center distance on shank is 1/2". Center distance on circle is 3/8". This allows the gutter to be pitched by lowering the circle on the shank in increments of 1/8". Berger does not imply fitness of use of our components in conjunction with competitors' products. Berger will not warrant any system that incorporates products not manufactured by Berger.

JAMES HARDIE COLORS

ITEM NUMBER	SIZE	TOP COLOR / REVERSE COLOR	MATERIAL	UOM
JHAGPWTR-24	24" X 50'	Aged Pewter / Gray Slate	Aluminum	EA
JHARTWHT-24	24" X 50'	Arctic White / Monterey Taupe	Aluminum	EA
JHAUTTAN-24	24" X 50'	Autumn Tan / Pearl Gray	Aluminum	EA
JHBBBLUE-24	24" X 50'	Boothbay Blue / Navajo Beige	Aluminum	EA
JHCOB-24	24" X 50'	Cobble Stone / Evening Blue	Aluminum	EA
JHDPOCEAN-24	24" X 50'	Deep Ocean / Iron Gray	Aluminum	EA
JHKKIBRN-24	24" X 50'	Khaki Brown / Night Gray	Aluminum	EA
JHTIMBARK-24	24" X 50'	Timber Bark / Light Mist	Aluminum	EA
JHCLRDRESP-24	24" X 50'	Country Lane Red / Rich Espresso	Aluminum	EA
JHHMOSMSGE-24	24" X 50'	Heathered Moss / Mountain Sage	Aluminum	EA

***Coils are dual-sided:** The reverse side of the coil features a different color; order desired color based on part number listed above that corresponds with the column labeled "TOP COLOR / REVERSE COLOR".

APPENDIX

GUTTERS & ACCESSORIES COLORS

Colors shown are as close to actual colors as allowed by the printing process. Actual paint samples are available; request samples prior to installation. Note: Colors vary depending on position and angles.

Note: FreedomGray™ is made of copper and coated with a unique, patented tin-zinc alloy. It offers all the advantages of copper in a naturally weathering earth tone gray color.

ORDERING

Enter degree code (_) and color code (• •) when ordering. For example: PR _ • • 3 filled out as PR0ADB3 would be a 3" Aluminum Painted Elbow at 30° and painted Amp Dark Bronze. Please enter the whole code with no spacing. If you have any questions, please call us at 800-523-8852.
