

ASH SHOVEL

USER GUIDE

HOW TO USE THE ASH SHOVEL

Clean out the ashes after several burns or when the ash has almost reached the top of the X Airflow™ system in the bottom of the fire pit. This is important for maintaining airflow and always having a smokeless fire.

STEP 1

Wait until fire is out. Make sure your fire pit and coals are completely cool before using your ash shovel. *(A good time to clean out ash is before your next burn to allow some time for your fire pit and ashes to cool down.)*

STEP 2

Take your ash shovel and put it on the bottom on the fire pit near the outer edge of the fire pit and then push the ash toward the straight edges of the X Airflow system and around the circumference of the fire pit.

STEP 3

Lift ashes up and out. After you push the ash toward the center, lift the ashes up and out and repeat until your fire pit is clear. Repeat several times on all 4 sides of the X Airflow system, until all ashes have been cleared.

FOR YOUR SAFETY

Always practice safety first when using the Breco® ash shovel.

When using your Breco ash shovel, exercise the same precautions you would with any open fire. Never leave your Breco ash shovel unattended, especially around children and pets.

Ash shovel may have sharp edges.

Make sure your fire pit and coals are completely cool before using your ash shovel. *(A good time to clean out ash is before your next burn to allow some time for your pit and ashes to cool down.)*

HOW TO BUILD THE ULTIMATE FIRE

STEP 1

CHOOSE YOUR FUEL.

Select a firestarter material, like shredded newspaper or cardboard, a dry, thinly split softwood for kindling, and a dry, split hardwood for your main fuel. Make sure your fuel is less than 4" in diameter. Focus on creating as much airflow as possible throughout the whole fire building process.

STEP 2

BUILD A LOG CABIN.

Start with 2 full-size pieces of cord wood and lay them caddy-corner on the X Airflow™ system across from each other. Then, lay two pieces of kindling perpendicular across those. Fill the inside square with your firestarter. Continue with the pattern in kindling until it approaches the top of your fire pit, filling the center with firestarter as you go, if you're using newspaper or cardboard. If you're using another type of firestarter, you can place it in the middle when you start building, but there's no need to fill the whole structure with it. Taper the "cabin" inward as you get close to the top.

STEP 3

LIGHT IT UP.

Using a grill lighter or a long match, light the firestarter at the bottom of the log cabin. We do NOT recommend using regular matches, as they can be harder to use when you're reaching into the fire pit.

STEP 4

FEED THE FLAMES.

Once you've got a tiny blaze going, start adding cord wood without disrupting or knocking over the kindling cabin. Starting with smaller cord wood pieces and gradually using larger ones as the fire grows, lay the pieces toward the perimeter of the bottom of the fire pit. This will help your fire spread evenly around your fire pit.

STEP 5

LET IT BURN OUT.

When you're done with your fire, patiently wait for the fire to burn out on its own. Don't pour water on it, and never leave your fire unattended. If you do need to walk away, always cover with a spark screen and make sure there's nothing near the fire pit that could catch on fire or be damaged. Clean out the ashes every 4-5 burns once the fire pit cools to maintain airflow and always have a smokeless fire.

Breco, LLC warrants to the original purchaser that the Breco Fire Pits and Accessories are free from workmanship and material defects during the lifetime of the original purchaser. In addition Breco, LLC warrants no rust through or burn through for a period of five (5) years from purchase.
