AMERICAN MADE QUALITY

ESTWING[®]

For over ninety years, Estwing has taken pride in designing and manufacturing the finest American made hand tools. Our hammers and axes are forged in one piece of solid American steel to last a lifetime. These are tools you will use and then hand down to the next generation.

Here at Estwing, we are constantly working to continue that legacy and provide the best tools available. We don't rest on our laurels, but continue to innovate, with each customer in mind, from the casual user to the serious professional. Estwing tools are crafted with quality, and all the tools shown in this catalog are proudly made in America.

ESTWING'S MISSION:

To provide the customer with the world's
finest striking tools.

Estwing Manufacturing was founded in Rockford, Illinois by Ernest Estwing in 1923. He patented the one-piece solid steel forging for hammers and axes, which became the hallmark of Estwing tools. Our earlier hammers featured the iconic leather grip and can still be found in tool boxes across America.

Estwing is still family owned and committed to manufacturing in America. "Made in the U.S.A." means

a lot to us, our workers and our community. We take pride in our tools and our mission; to provide the consumer with the world's finest striking tools.

Our tools are made to last generations. It's not just a hand tool. It's a legacy. It's an Estwing.

QUALITY HANDTOOLS

FULLY FORGED IN ONE
PIECE OF AMERICAN
MADE STEEL

FEATURES

All Estwing hammers and axes are forged in 1 piece, that is, the head and handle are forged in one solid piece. There are no head or handle-neck connections to loosen and this is the strongest construction known. Every hammer and axe is quality tested to standards no other tool can match.

American made steel is the proven leader in quality. Sourcing our steel from the United States also supports our national manufacturing base. When we say American Made, we mean it.

Estwing's nylon-vinyl grip, with its patented Shock Reduction feature, is permanently molded and bonded to the handle shank. This exclusive grip reduces the vibration transfer from the hammer blow to the user by as much as 70%. For the professional user who wields a hammer on a daily basis this provides unsurpassed comfort. No other hammer has this grip.

Many of our tools are offered with genuine leather grips. Laminated leather washers are pressed on and riveted, providing a comfortable leather grip that wears beautifully. Our leather grips are lacquered for a beautiful finish that only leather has.

Our patented end caps are added to some of our hammers. These end caps are super tough nylon, molded and bonded into the Shock Reduction Grip. The end caps on the bricklayer's hammers are used for setting bricks, and on the end of Engineer's hammers for protecting the grip.

These features are designed to ensure your Estwing tool is the most durable tool on the market. We make tools that last for generations.

A close-up photograph of a person's hands using an Estwing axe to split a log. The person is wearing a red and black plaid shirt. The axe has a silver head and a wooden handle with a yellow and blue label that reads "ESTWING". Wood chips are flying off the log as the axe splits it. The background is a blurred forest with sunlight filtering through the trees.

SAFETY FIRST:

- Nail Hammers are for driving and withdrawing common nails only.
- Drilling Hammers are intended to be used for striking chisels, punches, star drills and hardened nails.
- Ball Peen Hammers have two separate uses. The flat striking face of the ball peen is used for striking punches and chisels. The rounded ball peen end is used for riveting, shaping, and straightening unhardened metals.
- When striking a struck tool (chisel, punch, or countersink), the striking face of the hammer should have a diameter at least 3/8" larger than the face of the struck tool.
- Drywall Hammers are to be used for scoring and installing drywall.
- Shingler's Hatchets are to be used for installing and trimming composition, wood, and fiberglass shingles.
- Bricklayer Hammers are used for setting or splitting bricks.

Tools can be made to chip if struck against another tool or hard object, with possible eye or other bodily injury. Always wear safety goggles when using striking or struck tools. Bystanders shall also wear safety goggles.

Always discard tool if any of the following occur:

**Chips or dents
on face**

Mushroom face

**Crack in
claw section**

Dents in hammer handle

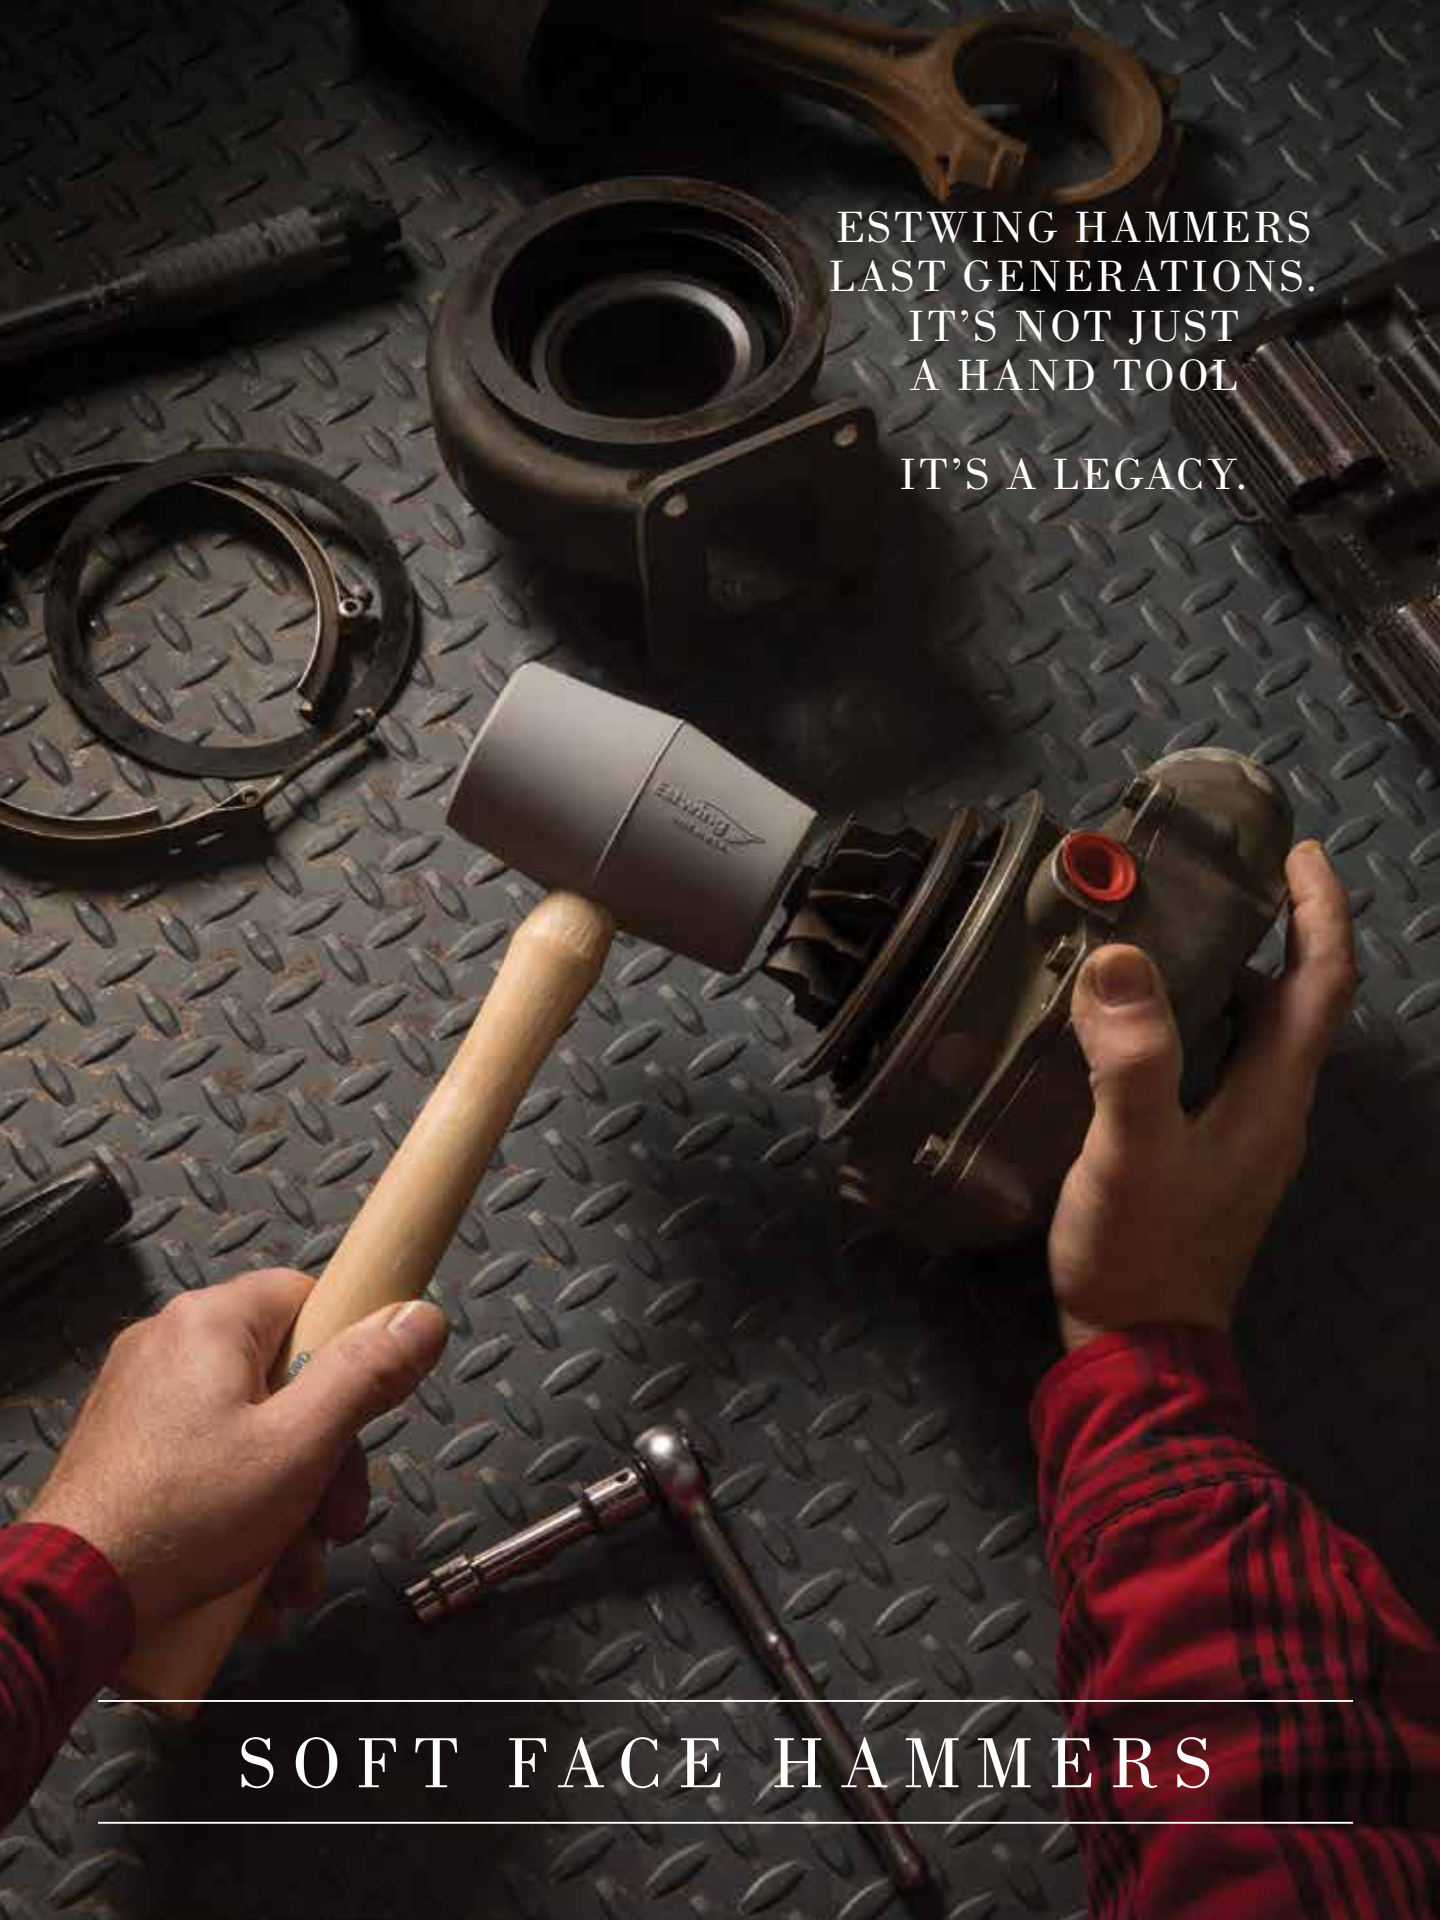

WARNING!

Never strike a hammer or any striking tool against another tool or hardened object.

PROTECT YOUR EYES WEAR SAFETY GOGGLES

OSHA regulation 29 CFR 1910.133 requires the use of eye protection not only for workers using striking tools, but also for nearby workers in the immediate working area. Similar requirements are contained in OSHA Construction Standards 29 CFR 1926.102. Mine Safety and Health Administration requires eye protection in the Mining Environment 30-CR 55.14.4, 30 CFR 56-15-4, 30 CFR 57-15-4, 30 CFR 75.1720 (a) and 30 CFR 77.1710 (a).

A person wearing a red and black plaid shirt is using an Estwing soft face hammer to work on a mechanical component. The hammer has a light-colored wooden handle and a grey soft face head with the Estwing logo. The person's hands are visible, holding the handle and the workpiece. The background is a dark, textured surface with a diamond plate pattern. Various tools are scattered around, including a large metal ring, a smaller metal ring, a long metal rod, and a pair of pliers. The lighting is dramatic, highlighting the hammer and the person's hands.
