### GROWING GUIDE

<b>Tomatoes, Peppers</b>	To prepare the soil, scatter a 1 foot wide band of ferti·lome® Tomato and Vegetable Food at the rate of 1 pound to every 50 feet of row. Mix the fertilizer in thoroughly and set the plants. Once a month scatter about ½ cup of ferti·lome® Tomato and Vegetable Food around each plant in a circle extending at least 2 feet from the stem in all directions.
<b>Root Crops (Potatoes, Onions, etc.)</b>	Prepare the soil and scatter ferti·lome® Tomato and Vegetable Food along the bottom of the furrow at the rate of 1 pound to every 25 ft. of row. Mix with soil.
<b>Beans, Peas, Corn, Okra, etc.</b>	Scatter a 6 to 12 inch band of ferti·lome® Tomato and Vegetable Food at the rate of ½ to 1 pound per 50 feet of row when the plants are 2 to 6 inches tall. Make a second application at the rate of ¼ to 1 pound per 50 feet of row when the plants are 10 to 12 inches tall. Mix into the soil and water in.

Tomatoes have become the most popular vegetable grown in home gardens. ferti·lome® Tomato and Vegetable Food is especially formulated for better growth, better flavor, and bigger harvest by supplying plant food plus micronutrients to produce vigorous Tomato and vegetable plants.

Successful gardening, as always, starts with well prepared soil. Till the soil to a depth of 6 to 14 inches prior to planting or fertilizing. It is helpful to check the soil pH prior to planting and make the necessary adjustments for each vegetable grown. Use the growing guide below for proper fertilization practices.
