Primed Pine Moulding

About Primed Pine

Primed pine mouldings are a paint grade product made by trimming defects from common grade lumber to make short lengths of clear lumber. These pieces are then fingerjointed into longer lengths and manufactured into mouldings. This procedure helps reduce the tendency of the piece to twist or warp. A coat of primer is then applied by machine.

Final finishing requires applying one or two top coats of additional primer or paint as desired. Pre-priming at the mill is designed to be less expensive than painting by hand, and allows you to paint with your own choice of oil, lacquer, or acrylic based products.

Premium Primed Pine products have three coats of factory applied primer for an ultra-smooth surface, virtually eliminating visible joints and grain. No more than one finish coat of paint is needed in most cases.

Primed Pine, and Premium Primed Pine is lighter and easier to cut and install than MDF. They have a tendency to hold sharper edges found in intricate moulding profiles and are less prone to chip than MDF mouldings. They can be used in areas of limited moisture such as bathrooms provided they are thoroughly primed and sealed on cut edges.

Primed pine mouldings usually cost less than the stain grade equivalent because less expensive wood is used in the manufacturing process.

The Premium Primed mouldings in our Signature Series are available in distinct collections of matching bases, casings and crowns for customer convenience.
