DOCK LADDER

15503

INSTALLATION GUIDE

- 1- Assemble the 2 arches in the 4-steps section and secure them with the 4 stainless steel supplied bolts, washers & nuts on the outside.
- 2- Ideally, you should plan to add two strengthening pieces of wood under the decking to distribute the pressure of the bolts. It could be two 40 cm (16 in) wood pieces.
- 3- Fix the strengthening pieces under the decking where the ladder will be installed.
- 4- Put the ladder at the desired place, making sure that the 2 arches are parallel, mark the holes, remove the ladder and make 7/16" holes for the bolts with a cordless drill.
- 5- We recommend to bolt in the ladder with 4x 3/8" x ± 4" bolts (depending on decking and wood piece thickness) with 2 nuts & lock washers. Manipulate tools carefully as the ladder is not warranted against rusting. We suggest installing the bolts heads down to ease removal operations for winter (see drawing).
