How Our Products Make a Difference

Natur-Bag®

Zero Waste Food Collection

Natur-Bag® products are currently being used in schools to simplify and improve their organic waste diversion programs. The bags are 100% compostable and can be disposed at compost facilities along with the organic waste. Natur-Bag® products make the collection of organic waste clean and efficient. This cuts down on the costs of cleaning unlined collection bins, and reduces contamination of organic waste by non-biodegradable materials.

Natur-Bag® products aid in the environmental and economic benefits of composting and by using them as part of their composting programs schools have reduced garbage tipping fees by nearly 25%.

Natur-Ware®

Sustainable Practices in Offices

Corporations looking to implement sustainable practices in their offices have chosen Natur-Ware® biobased cutlery for their cafeterias and coffee stations. Users of Natur-Ware® cutlery are pleased that it is renewable-resource based, sturdy, and fully compostable.

Natur-Ware® cutlery especially made a difference for companies that initially tried starch-based cutlery and found it to be flimsy and melted in hot foods. People often had to use two or three of the starch cutlery pieces throughout a meal. Also, many starch-based cutlery products are blends of starch and polypropylene plastic and are not completely biodegradable.

Using Natur-Ware® cutlery results in a biobased and fully compostable solution that is cost-effective without sacrificing convenience and usability.
