Aluminum Insect Screen

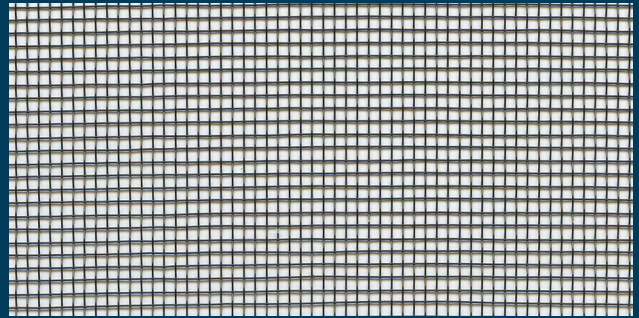

BY PHIFER

Black Aluminum Screen offers excellent outward visibility in an aluminum insect screening product. Produced with Phifer's electrodeposition paint system, Black Aluminum screen has a premium coating that is durable and has excellent weathering characteristics.

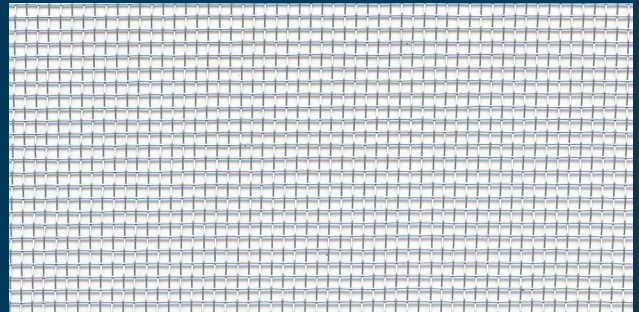

Brite Aluminum Screen is a traditional insect screen that is proven and reliable. The finish is uniform and makes for easy fabrication into window, door, and porch applications.

Charcoal Aluminum Screen offers excellent outward visibility and is coated with a rich charcoal finish in Phifer's electrodeposition paint system. The glare is reduced by the dark color, which improves the outward visibility. The consistent finish of the screen gives it an architect-pleasing appearance.

Aluminum Screen for Tiny Insects

BY PHIFER

This tightly-woven metal wire mesh, offers the best outward view of all aluminum screen products. Developed specifically to protect against tiny insects, it is perfect for windows, doors or screened porch areas where gnats, sand flies or no-see-ums are a problem.

Black

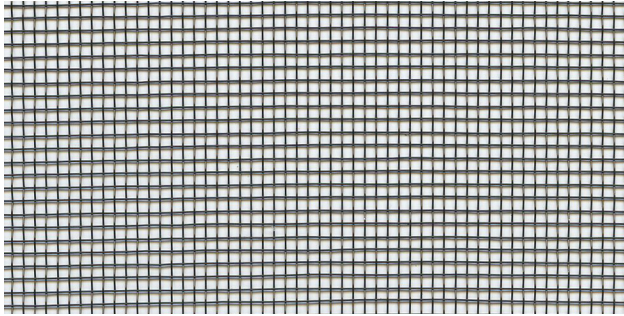

Phifer offers a complete selection of aluminum woven insect screening materials for all your window, door and porch applications. Protecting people from annoying and often disease-carrying insects, Phifer has been supplying aluminum insect screening to the United States and the world for half a century. Phifer's Aluminum Screen sets the standard for the screening industry's level of quality and dependability with the production of a precision woven and uniform coated screen mesh.
