# WHEN TO USE A HUMIDIFIER

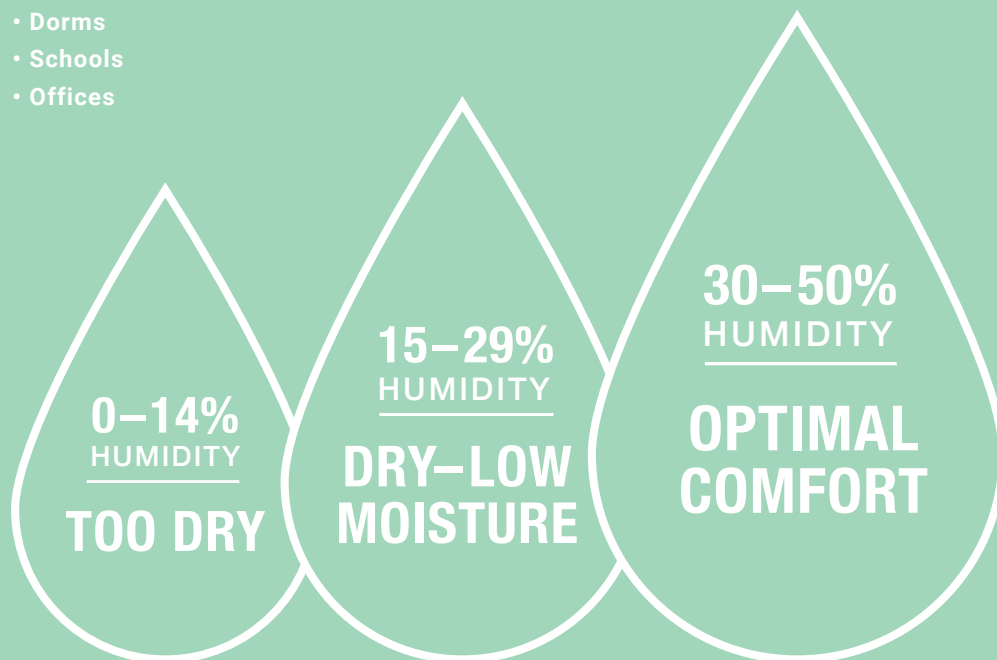

Winter: glistening white snow, nights by the fireplace and — **dryness**. While not ideal, dryness and winter go hand-in-hand. Good news is that using a humidifier can help greatly in keeping moisture in your home during the harsh winter months, and even year-round.

Dry air often causes itchy throat, dry skin, nose bleeds, sinus infections, headaches and can increase flu transmission by 40%. This is why it is important to maintain your indoor humidity at recommended levels between 30%–50%\*. Humidity in this range allows for easier breathing, supports nasal passage and throat functions, helps create better sleep and may allow you to lower your home thermostat by as much as 5°F, reducing your heating bill.

Humidifiers come in three different varieties: ultrasonic, evaporative and warm mist — all of which will help increase humidity in your space. Humidifiers don't just add humidity to the air though, some Perfect Aire humidifiers offer useful features like night lights and aroma diffusing functions. Just add water and you're on your way to a more comfortable environment.

## IDEAL FOR:

- Bedrooms
- Living Rooms
- Daycares & Nurseries
- Dorms
- Schools
- Offices

## WATA

# TRAVEL-SIZE ULTRASONIC COOL MIST HUMIDIFIER

- Best for small spaces
- Whisper quiet operation
- Uses a variety of water bottles as water tank
- Produces visible cool mist
- 360° adjustable output direction
