## Pro-Hide<sup>®</sup> Silver Interior/Exterior Latex Block Filler

**Z8485 / F8485**

Pro-Hide<sup>®</sup> Silver Interior/Exterior Latex Block Filler is a high hiding, high solids, easy-to-use formulation that primes and fills interior and exterior above grade, unpainted aggregate block, poured-in-place concrete, precast concrete surfaces, and rough masonry in one application. Not for use over existing coatings.

- Superior moisture resistance
- Excellent filling characteristics
- Ideal for resurfacing deteriorated concrete walls and ceilings

### Recommended Uses

Use this product on interior or exterior above-grade unpainted masonry, concrete, cement, and flat surfaced concrete block

### Recommended Systems

**Unpainted Aggregate Block, Poured and Precast Concrete:**

**Untopcoated, light service:**

**Interior:** 1 coat Pro-Hide<sup>®</sup> Silver Int/Ext Latex Block Filler

**Exterior:** 2 coats Pratt Pro-Hide<sup>®</sup> Silver Int/Ext Latex Block Filler

**Topcoated:**

1 coat Pro-Hide<sup>®</sup> Silver Int/Ext Latex Block Filler

1-2 coats Pratt & Lambert<sup>®</sup> Architectural or Industrial Maintenance Coating, including latex and alkyd topcoats, water-based epoxies, solvent-based epoxies, and polyurethanes

### Technical Data

**Vehicle:** Vinyl Acrylic

**Finish:** Flat

**Color:** Off White

**Flash Point:** N/A

**Volume Solids:** 48 ± 2%

**Weight Solids:** 68 ± 2%

**Weight/Gallon:** 13.5 lbs.

**VOC (less exempt solvents):** VOC < 50 g/L – 0.42 lb/gal per 40 CFR 59.406

**Spread Rate:** 75-125 sq. ft. per gallon, porosity and texture dependent

**Film Thickness:** @ 18 mils wet; 9 mils dry

**Shelf Life:** 36 months, unopened

**Drying Time (@ 77°F, 50% R.H., 18 mils wet):**

**Note:** Drying times are temperature, humidity and film thickness dependant.

**To Touch:** 2 hrs

**To Recoat:**

-Waterborne 18 hrs

-Solventborne 48 hrs

**Tinting:** Do not tint

**Sizes:** 5 Gallon

# Product Data Sheet

## Surface Preparation

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

To ensure proper adhesion, the surface to be painted must be free of dirt, dust, oil, grease, wax, rust, and any other surface contaminants. Clean surface using an appropriate cleaner to remove dust and dirt. Rinse thoroughly and allow to dry. Sand or scrape surface lightly to remove any loose paint and to smooth old surfaces. Dull glossy surfaces by using 150 grit sandpaper. Fill cracks and holes with spackling paste to smooth uneven areas. When dry, sand and clean before spot priming.

**Concrete, Masonry, Block:** All new surfaces must be cured according to the supplier's recommendations—usually about 30 days. Remove all form release and curing agents. Rough surfaces can be filled to provide a smooth surface. If painting cannot wait 30 days, allow the surface to cure 7 days and prime the surface with Pro-Hide® Gold Exterior Acrylic Cement & Stucco Primer. Cracks, voids, and other holes should be repaired with an elastomeric patch or sealant.

**Mildew:** Remove before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. **DO NOT ADD DETERGENTS OR AMMONIA TO THE BLEACH/WATER SOLUTION.**

- When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle.
- Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, overthinning, climatic, conditions, & excessive film build.
- Excessive reduction of material can affect film build, appearance, and adhesion
- Make sure material is forced into pores and bugholes in order to provide a pinhole free surface
- Do not use below grade as a hydrostatic waterproofer or in immersion service
- Rolling will provide a textured finish. Squeegee will provide a smoother finish.
- For better filling results apply by airless spray & immediately back roll.

## Pro-Hide® Silver Interior/Exterior Latex Block Filler Z8485 / F8485

### Application

Pro-Hide® Silver Int/Ext Latex Block Filler is ready-to-spray and does not require thinning. Mix material thoroughly to a uniform consistency with power agitation and apply by brush, roller, or spray. Follow by squeegee, trowel or roller, being careful to force material into pores in order to produce a relatively smooth surface. In severe wet areas, a smooth continuous pinhole-free appearance is necessary for proper protection before topcoating. Two coats will provide the most uniform surface.

#### Temperature (air, surface and material):

Apply at temperatures above 50°F

No reduction necessary

#### Airless Spray:

Pressure.....	2300 psi
Tip.....	.028"
Reduction.....	As needed up to 1pt/gal

#### Brush:

Brush.....	Nylon/polyester
Reduction.....	Not recommended

#### Roller:

Cover.....	3/8"-1 1/2" synthetic
Reduction.....	Not recommended

### Tips to Improve Performance

- Clean the surface thoroughly
- Prepare the substrate to create a uniform surface
- Patch cracks, crevices, and through-wall openings using proper sealant or patch
- Fill voids and openings around windows and doors using proper sealant or patch
- Caulk as needed using quality latex or paintable siliconized latex caulk or sealant

### Cautions

- **Protect from freezing**

### Clean Up

Clean spills and spatters immediately with soap and warm water. Clean hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with mineral spirits to prevent rusting of the equipment. Follow manufacturer's safety recommendations when using mineral spirits.
