CGC

IT'S YOUR WORLD. BUILD IT.™

PERFORMANCE CONSIDERATIONS

HRC

HIGH RECYCLED CONTENT
Products denoted as HRC contain greater than 50% recycled content.

WARRANTY
Basic ceiling panels have a 1-year standard warranty.

Mould and Humidity Resistance Panels
ClimaPlus™ panels are supported by a 30-year warranty against sag when used with CGC Donn® Brand Suspension Systems. These panels are ideal for areas exposed to heat, moisture or fluctuating climatic conditions. Panels with superior performance inhibit mould and stain causing bacteria. These products resist sag in up to 95% relative humidity and up to 40°C (104°F). ClimaPlus™ panels are warranted against sag for 10 years when used with any other brand of suspension system.

SOUND CONTROL
Many CGC ceilings offer enhanced sound control to help improve privacy, comfort and productivity in residential and commercial environments. Look for these performance attributes to help get the best performance from your suspended ceiling.

Sound Blocking (CAC) and Sound Absorbing (NRC) Explained
When sound strikes a ceiling, the sound can pass through the surface into the space beyond, it can bounce back or it can be absorbed, like a sponge absorbing water. CGC ceiling panels help you manage the sound in your space for maximum performance.

CAC (Ceiling Attenuation Class) measures a panel's ability to prevent sound from travelling through it. A CAC rating above 35 is considered high-performance.

NRC (Noise Reduction Coefficient) specifies the ability of a material to absorb rather than reflect sound. Ratings range between 0-1, with higher numbers representing greater performance.

LIGHT REFLECTANCE
LR (Light Reflectance) represents the percentage of light reflected from the surface of a material. Ceilings with LR above .75 help prevent eyestrain and conserve energy by reducing the amount of lighting required to illuminate a space.

FIRE RESISTANCE
All CGC acoustical ceiling panels are rated Class A (the highest possible) as tested to CAN/ULC S102. These materials do not sustain a fire when flame is removed (scoring <25 points) and do not generate significant amounts of visibility-obscuring smoke (scoring <50 points).

CGC ceiling panels with Firecode® formulation contain special additives that increase fire resistance. Firecode® products are components that can contribute to a fire-rated assembly and are tested to CAN/ULC S101 and ASTM E119.

INDOOR AIR QUALITY AND VOC EMISSIONS
Indoor air quality (IAQ) is a vital consideration because it has such an impact on the health and wellbeing of a home or building's occupants. The choice of building materials is a critical factor because many products can release volatile organic compounds (VOC), which include thousands of synthetic and natural chemicals emitted by a wide array of materials, finished materials and even microorganisms such as mould and mildew. To help create healthy, comfortable spaces, CGC provides a portfolio of ceiling panels and tiles with ZERO or LOW formaldehyde emissions, as tested per California Special Environmental Requirements, Specifications Section 01350.

ENVIRONMENTAL RESPONSIBILITY
In recognizing the importance of safeguarding the environment, USG/CGC manufactures ceiling products that are environmentally safe when used as intended. In addition to offering products that help conserve energy and provide life-safety and high durability, we operate according to a self determined policy of environmental stewardship. These guidelines cover the products we make as well as the way they are manufactured. Our plants recycle heat to conserve energy, treat and recycle water to reduce consumption and return manufacturing waste to the production process to keep material out of landfills. At CGC, we are committed to offering sustainable products that require fewer resources, use recycled and renewable materials and can be used in new ways in the future.

WITH CGC CEILINGS

From a simple white plane to a bold
design element highlighted with
texture, colour and pattern, a CGC
ceiling provides the crowning touch,
connecting and completing the
many elements that make a space
comfortable and beautiful. Explore
the many great styles and attributes
we offer—as well as solutions for
creating healthy and sustainable
environments—to take the look
of your room to new heights.

CGC ARCTIC™

HRC

ClimaPlus Non-Sag Warranty

- Naturally formed texture
- Integral colour throughout, helps mask nicks/scratches
- Formaldehyde free—exceeds the most stringent air quality standards
- Damage resistant panels—up to 3 times stronger—less replacement costs
- Mould/Mildew & Sag-resistant
- Good sound reduction performance

PRODUCT SPOTLIGHT

DID YOU KNOW?

Cast mineral fiber ceiling panels are manufactured using a cast process that enhances the surface appearance and provides excellent sound absorption and durability. A backing acts as a sound barrier and resists "breathing" (air passing through the surface), so the surface stays cleaner longer.

Cast panels also provide the following benefits:
- Integral colour throughout panel—masks nicks and scratches
- Easy to clean surface
- High light reflectancy
- Sag resistance
- Excellent abuse resistance

ZERO VOC EMISSIONS
As one of the largest surfaces in a space, a ceiling with zero-emitting panels makes a strong contribution toward creating healthy, sustainable environments.

PRODUCT SPOTLIGHT

DID YOU KNOW?

Elegance panels are made from gypsum and recycled glass through a completely automated manufacturing process ensuring consistent quality. These panels fit easily into standard 15/16" CGC Donn® Brand Ceiling Grid to create a dramatic coffered ceiling.

Elegance panels also provide the following benefits:
- **Moisture and Mould resistance**
- **Fire resistance: Class A flame spread when tested to ASTM E84**
- **Drills and cuts easily—ideal for situations where lights, sprinklers and vents are required**
- **1/2" thickness throughout tile for maximum strength**
- **Will not sag or warp**
- **Custom colour finishes and designs available upon request**
