For those who live their Craft®

FOR THOSE WHO LIVE THEIR CRAFT®

Clauss® tools have been the choice of professionals since 1877. Discriminating home users have also treasured these classic tools, passing them along through generations. Our professional heritage means Clauss tools are engineered for the demands of continuous daily use.

Our cutlery and tools are made of superior-grade steel and are through-hardened to hold an edge, cut smoothly and withstand repeated sharpening. Clauss True Professional® products will withstand the toughest task and continue delivering over extended use.

Task-driven solutions, innovation and commitment to the Clauss heritage will delight existing and future generations of loyal users.

Clauss is proud to support an environmentally sustainable platform where all Clauss products are packaged using recycled and recyclable plastics and post-consumer corrugate cards. And now, Clauss is using recycled materials for a selection of products as well. Clauss...“Green Products for a Green World.”

Lifetime Warranty

At Claus our legendary products are supported by an equally legendary promise. If your Claus product fails to perform due to defects in materials or workmanship, we will replace it regardless of age. Normal wear, sharpening, industrial use or abuse, misuse or neglect is not covered. Defective products will be repaired, replaced or substituted with the same product or one of equal value. Send the product in its original box for proof of purchase along with an explanation of defect. Other consumer rights may vary from state to state. Replacement blades are excluded from the lifetime warranty.

Terminology

Titanium Bonded®

Titanium Bonded is not painted or plated, but an application of a unique formulation of titanium and chromium nitride to the surface of cutting blades that actually penetrates and treats the metal to create a permanent bond. The patented Titanium Bonding process provides the following benefits; corrosion resistance, adhesive resistance and the process itself makes the stainless steel 3X harder than untreated stainless providing a blade that stays sharper longer.

Titanium Non-Stick

Our proprietary new coating bonds Titanium with a non-stick formula. Highly resistant to adhesives including tape, glue, Velcro® and natural adhesive substances such as sap. This is a durable micro ceramic coating that will not wear off – up to 100,000 cuts. It is 5X harder than Stainless Steel alone and will stay sharper longer.

Carbonitride Titanium™

Carbonitride Titanium is one of the hardest surface treatments containing titanium. Harder than carbide. Harder than chrome. Our proprietary process creates a permanent molecular bond with the blade surface. Will not flake, blister, chip, or peel. A complex crystalline structure forms which protects the blade surface against wear, staining, and damage. Patent pending technology.

Hot-Forged

Claus® continues to hot-forged its tools to produce a superior product from high quality rods or strips of steel, heated in a furnace and then forged from a drop hammer into the desired shape. This is an expensive process, but it is recognized as the best method to produce quality tools.

Thru-Hardened

All Claus hot-forged scissors and shears are thru-hardened, rather than case-hardened, which only hardens the surface. Having thru-hardened scissors and shears means that after re-sharpening, you still have a hard steel blade, and scissors and shears that will hold their edge and can be re-sharpened.

Heat-Inducted Blades

Heat Induction is a triple-heat process. The base steel is heated, then the steel supporting the blade edges and a final heat treatment on the blade edges providing up to a 62Rc. This triple-heat process is a precise heating technology to a specific area of the blades providing a stronger, longer lasting cutting edge.

SureSet®

A premium adjustable fastener that provides a locking pivot. It reduces friction when opening and closing, and allows tension adjustment with only one hand.

Knife Edge

"Knife edge" shears have a more acute angle on the cutting edge than "regular edged" shears. They make cutting thick, dense materials such as carpet easier and put less stress and fatigue on the user.

High Carbon Cutlery Grade Steel

Quality tools start with quality steel. The more carbon in the steel, the longer the life of the tool. Cutlery grade steel usually means high uniformity and strict control over trace elements in the steel. Claus uses high carbon cutlery steel to ensure the best quality tools possible.

Molybdenum Steel

Claus also makes shears with high grade molybdenum alloy steel for those who need tools for extra heavy cutting. When hardened, molybdenum steel forms a very durable, tough, and uniform grain structure. This gives our "Moly" shears' blades excellent holding characteristics, which prolongs useful life even when used for heavy duty cutting.

Heavy Duty

Wider, thicker blades help prevent spreading at the tips and give full cutting action even when cutting thick, dense materials. In addition, the over-sized and adjustable nut and bolt assembly reduces flex and adds rigidity, transferring the power to the cutting edges.

High Leverage / Claus Backbone

Extra cutting power is developed by changing the normal power ratio of the tool. Claus provides the ultimate in high-leverage cutting by increasing the back-bone width of the blade so you get high performance and still retain the full length of cut you need.

Serration

Some material and round objects (such as sheet metal, Kevlar® or wire) tend to slip ahead of the cutting blades. Serrated blades allow the jaws to grip and cut. The types of serration Claus uses on its tools have proven to be adjusted specifically for the task at hand.

Certified Double-Plated

Claus has *always* double-plated its hot-forged tools using nickel for luster and chrome for durability, ensuring you a product that is rust and stain resistant. The Claus process is costly, but ensures you a product with maximum service life and is your guarantee that they are the very best available.

Transfer of Power™

Transfer of Power is a technology that only Claus offers. In testing, Claus examined how the bows, fulcrum and blades can flex during cutting. In order to eliminate this from happening, Claus instituted ridged bows, oversized fulcrum and industrial strong blade backbone eliminating nearly all of the flex in a scissor, shear or snip therefore transferring all of the power to the cutting edges.

Damascus Steel

Damascus steel blades are made by alternating layers of soft malleable wrought iron and hard, temperable steel. The steel portion of the blade gives it strength and the ability to hold a fine edge, while the iron provides elasticity so it won't break or chip. The layering pattern revealed by etching the surface has been refined over centuries into an art form.

*Claus retail Clamshell and Blister packages are made of post-consumer recycled content and recycled plastics.
Kevlar® is a registered trademark of the E.I. DuPont Company

DAMASCUS STEEL
For Precision Sharp Edges

8" Chef's Knife

The most important and versatile knife. Also called a Cook's Knife. Use for slicing, dicing, chopping and mincing. The shape of the blade allows user to rock the knife for a clean, precise cut.

8" Serrated Bread Knife

For cutting loaves of bread, cakes, etc. Cleanly slices crust without tearing softer bread inside.

8" Carving Knife

Also called a Slicing Knife. Use for carving / slicing cooked meats (ham, roast, turkey), larger fruits and vegetables, etc. Blade is more narrow than a Chef's Knife for more accurate cutting.

3.5" Paring Knife

Ideal for hand-held work. For peeling, slicing and trimming fruit, veggies, cheese and more.

Bamboo Block Included
