

Pool panels

Save time, labor, space and money

The market

The pool industry is a \$20 billion industry and growing. According to the Association of Pool & Spa Professionals®, there are over 8.3 million pools installed in the contiguous U.S. with as many as 395,000 new pools installed each year. Electric power, timing control and freeze control are all necessary for pool pumps to maintain effective pool operation. Outdoor lighting control and ground fault protection are a must as well. Eaton can fulfill these needs with their series of pool panels.

Product offering

Eaton offers a comprehensive pool panel product line. Designed as a sub-feed panel to provide protection to pool circuits, this panel also has a built-in timer to control the operation of the pool pump. The eight-circuit interior provides ample space for powering other outdoor electrical loads. Designated as one of our Quick-ProSM products, this panel can provide time, material and labor savings.

Features, functions and benefits

Eaton's pool panels come with the following features:

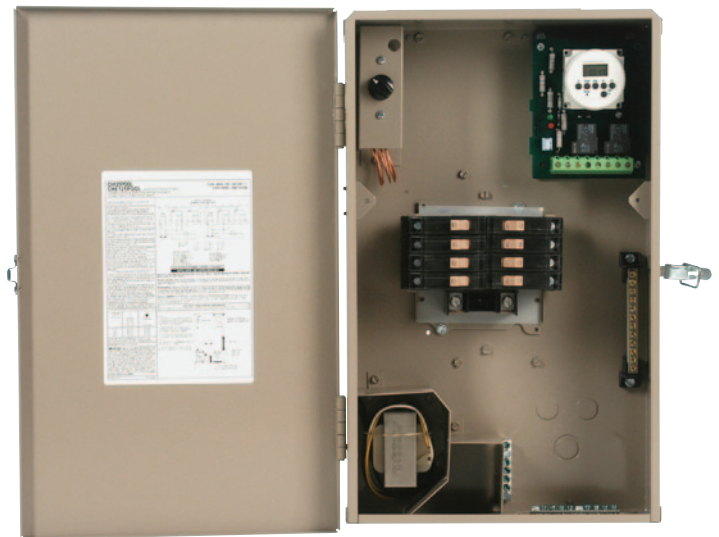

- *UL® listed—enabling a safe installation and easy electrical inspection. File No. E52977*
- Eight-circuit interior using Eaton's CH breakers (sold separately)
- Built-in timer for convenient control of pool pump (one provided, space for 2nd)
- Knockouts for a 120V GFCI receptacle, eliminating the need for mounting a separate receptacle and contributing to the time and labor savings
- Removable door for easy access and fast installation
- Pad-lockable door, providing security for homeowners
- Roomy enclosure for mounting optional kits
- Includes factory-installed neutral and ground bars for ease of installation

- Lifetime warranty on enclosure and separately supplied CH breakers. One-year limited warranty on timers, transformers and freeze control module

In addition to a high-quality product, Eaton also offers optional kits to enhance the panel's functionality.

Optional kits include:

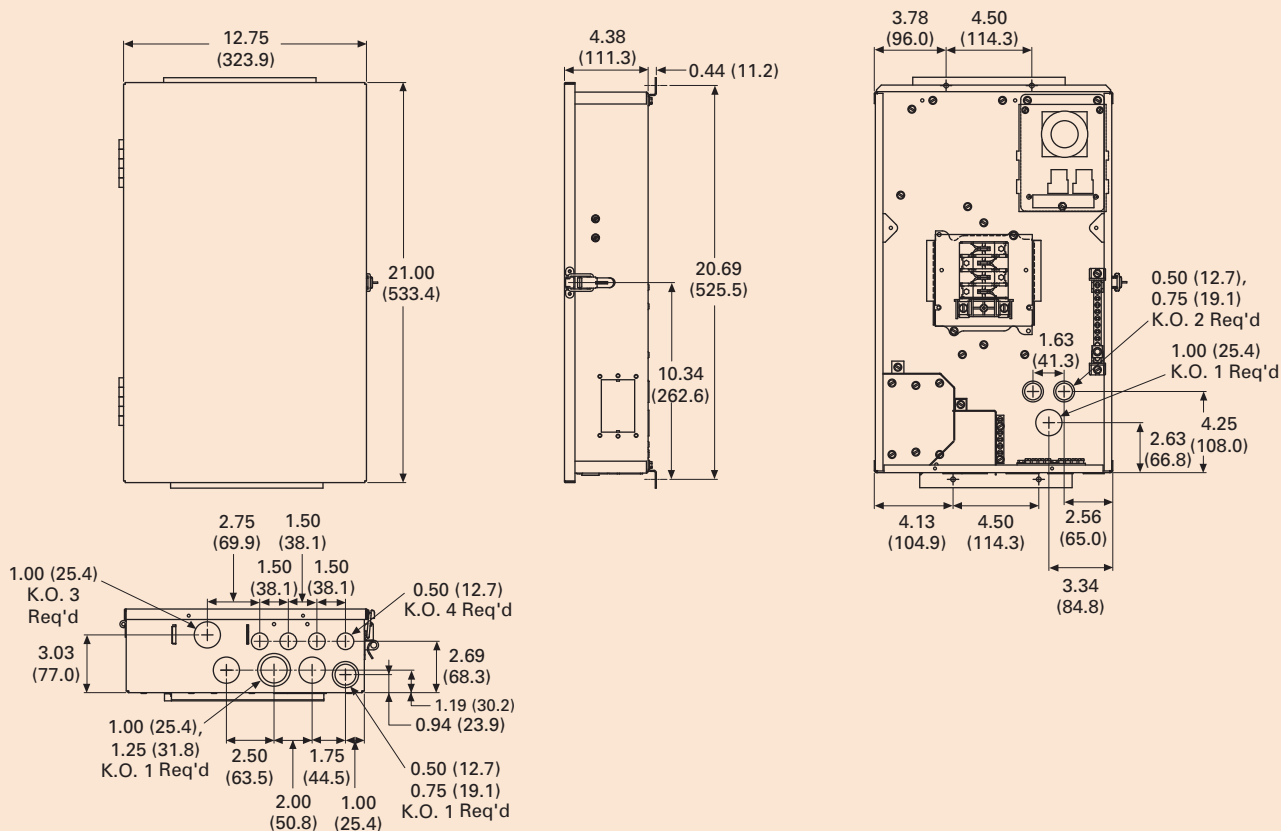

- Transformers for low voltage pool and landscape lighting
- Freeze control module to prevent damage to the pool pump during low temperatures
- Electronic and mechanical timers

CHE125POOL—shown with freeze control module (optional), breakers (not included) and transformer (optional) installed. Quantity 1 timer included as pictured. Deadfront included, but not shown.
