### INSTALLATION INSTRUCTIONS:

1. Install cables in connectors. If burrs or sharp edges result from the crimping process they should be removed. Uninsulated end of cable should not protrude beyond connector more than 1/4".
2. Remove the filler tabs only for 400 MCM and larger cable sizes. For covers HTC2 and HTC2S, remove the foam pad liner on one side, wrap it completely around connector, removing the outer pad liner.
3. Align cover halves centrally over connector such that inner and outer teeth interlock and body of connector lies between foam pads (See figure 1). For HTC2 and HTC2S, align cover with wrapped connector in the center (See figure 2).
4. With the palm of your hands or the use of channel locks, squeeze cover closed to full engagement of teeth, and check that ends are sealed.

**INSULATION COVERS ARE NOT REUSABLE.**

**NOTES:**

1. HTC2 and HTC2S use insulation wrap instead of end cushions for inner seal (See figure 2).
2. Connector Cat. No's. 54755 thru 54790 and 63148 thru 63180 require hydraulic crimping tools. Refer to connector instruction sheets.
