

## Mighty-Rite® Nonmetallic Split Bushings

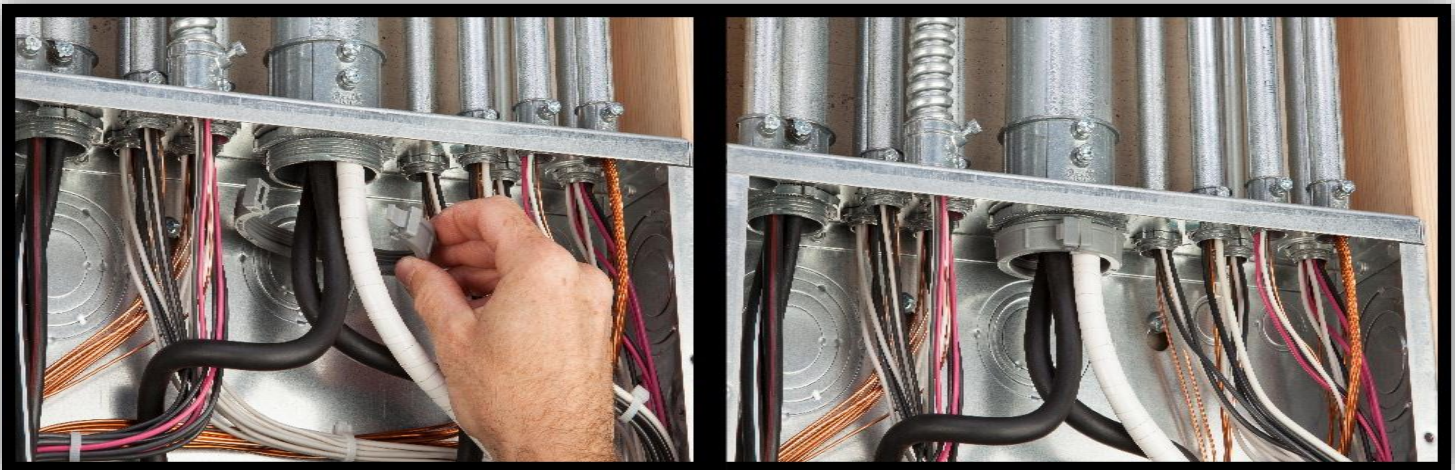

Bridgeport's SB series of nonmetallic split bushings offer a hinged design, which allows for the bushing to be installed before or after conductors have been pulled. This eliminates the need for expensive rework.

The patented self-aligning latch and hinge allows for easy one-hand installation and removal, no tools required.

Made from 105°C rated PA66 Polyamide plastic, the SB series bushing is available for 2" through 4" trade size Rigid/IMC conduit or fittings.

UL 514B and CSA C22.2 No.18.3
