

## INTRODUCING THE 4" AND 6" "POP TOP" DRAIN WATER RELIEVE CAP

MADE IN U.S.A.

US Patent 6,886,592

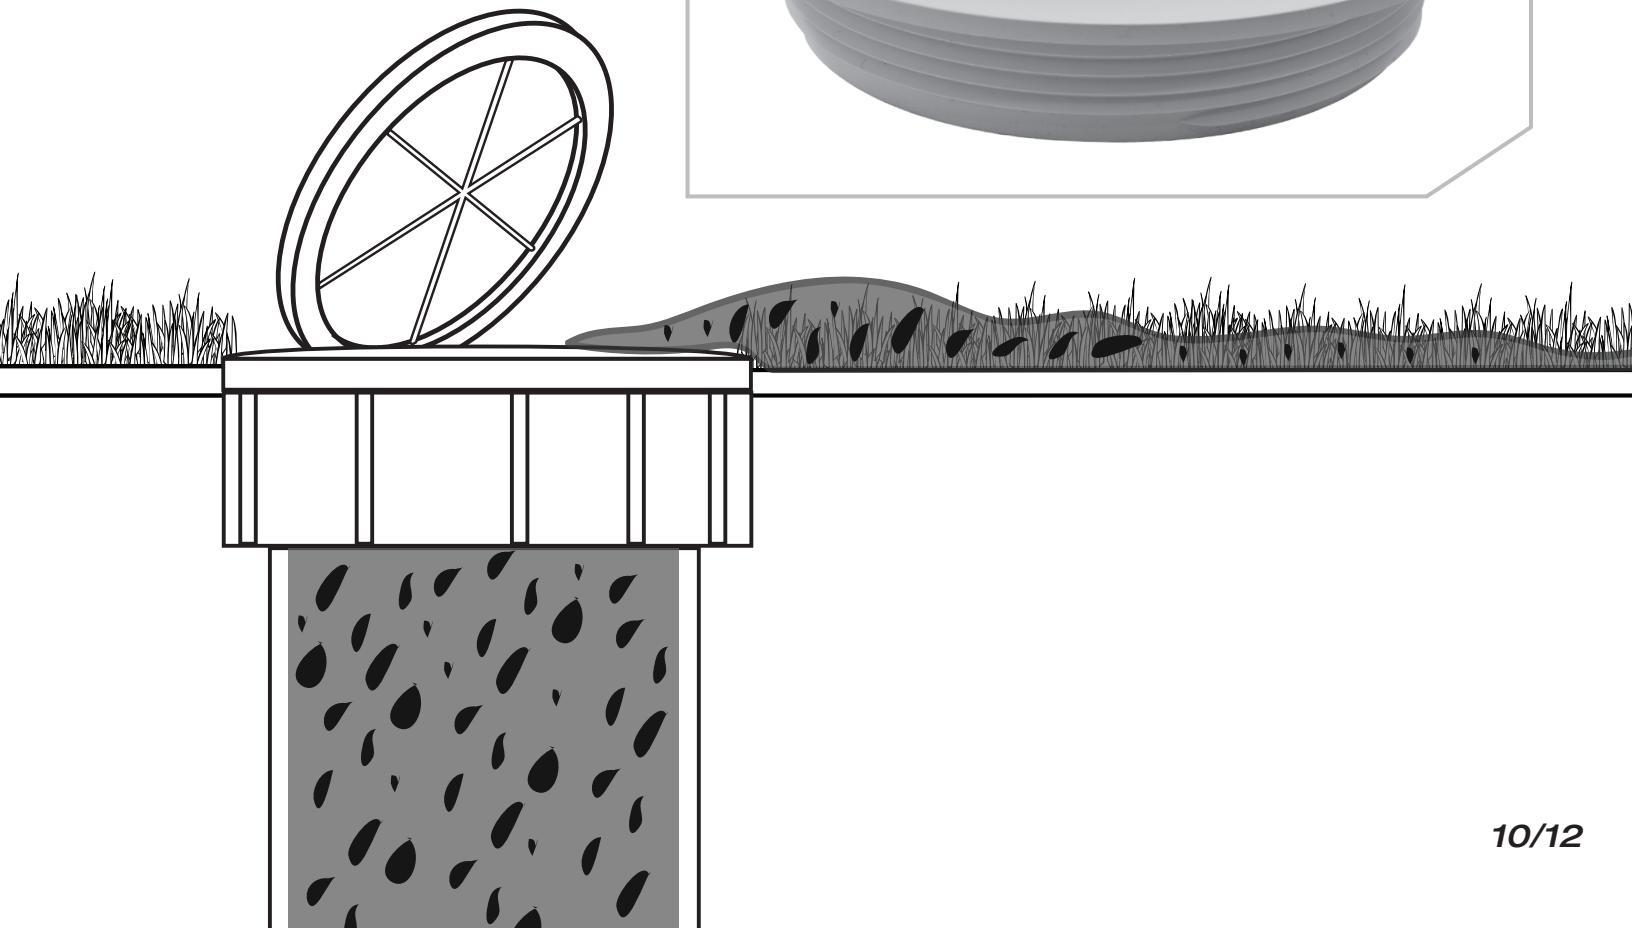

*The new and patented 4" and 6" PVC Pop Top Relieve Caps open by hydrostatic pressure which allows excess or backed up water in DWV lines, catch basins, channel drains, down spouts, gray or rainwater storage tanks or roof gutter systems to be discharged or diverted and released in water safe areas.*

The patented hinged lid stays attached to the unit as opposed to other brand's models that "pop out" of the fitting and then become unsanitary from contaminated waste water or are simply lost.

The "Pop Top" opens fully to allow full flow from the drain line and won't become debris clogged like center spring loaded competitive models.

The "Pop Top" very low profile prevents damage from, lawn mowers or weed eaters.

The "Pop Top" can be installed in horizontal applications which are ideal to discharge excess water from behind landscape retaining walls.

**4” AND 6” “POP TOP” DRAIN WATER RELIEVE CAP**

MADE IN U.S.A.

US Patent 6,886,592

The “Pop Top” simply threads into a 4” or 6” DWV Female x socket adapter.

The “Pop Top” can also be installed in any size drain line and to any style drain pipe by the use of a PASCO Flex Coupling or Reducing Flex Coupling.

PART NUMBER	SIZE
62304	4”
62306	6”

**Screw into a 4” cleanout or female x socket adapter**

**Adapt to any size pipe with use of a flex coupling (4” x 3” shown)**
