POP® MULTI-GRIP BLIND RIVETS

Functions in a Wide Range of Material Thickness

The Multi-Grip rivet will serve in applications where solid, soft materials and thicknesses normally require several rivet sizes. Oversize, irregular or misaligned holes are automatically compensated for by self-adjusting hole-filling capability. The mandrel head is retained in the rivet body, forming a tight, weather resistant seal.

What makes Avex different and better?

The Avex rivet adds important and exclusive features to those offered by ordinary blind rivets. The unique advantages designed into the Avex rivet allow for its use:

In wide-tolerance holes. Since the rivet can expand up to its own head diameter, accurate hole sizing or alignment is not necessary.

To pull sheets together. The extraordinary rivet tail expansion automatically effects superior clamp-up action on the parts being assembled.

Over a vast range of thicknesses. The “dubble-bubble” expansion feature offers the capability to fasten securely in both thick and thin grip ranges with a single length rivet.

While providing a sealed stem. The rivet material flows both behind and in front of the mandrel insuring a positively retained and sealed stem.

The System

Blind Installation: The single side installation feature of the Auveco Monobolt System allows one operator to produce high quality structural joints in seconds. Use of the Monobolt power tool does not require special skill or training, because the tool completely controls the installation cycle.

Multi-Grip: One size Monobolt fastener will function effectively in a wide range of material thicknesses (Example: .080" to .375"). This versatility decreases the potential for production errors and reduces fastener inventory requirements.

Uniform Clamping Action: Monobolt fasteners are engineered to draw materials together by developing positive clamping action.

Its Advantages

Structural Fastening: An installed Monobolt fastener yields high shear and tensile values. Conventional fasteners can be replaced by Monobolt without compromising structural requirements.

Positive Stem Retention: At the completion of the installation cycle, the stem is mechanically locked into the Monobolt shell, creating a vibration-proof joint of assured structural quality.

Flush Break Stem: Within the specific grip range for each size, Monobolt fastener, the stem is designed to break flush with the low profile head. Secondary finishing operations, such as grinding or milling, are not necessary to achieve good product appearance.

Complete Hole Fill: During installation, the Monobolt shell expands into 360° contact with the walls of the parent material. This feature, in conjunction with positive stem retention, produces weather resistant joints.

Quiet, Safe Installation: The Monobolt System, operating at 85db ("A" Weighted), complies with OSHA regulation governing plant noise levels and operator safety

How it Works

1. The Monobolt fastener is loaded into the nose of the placing tool and inserted in a prepared hole. As the tool is actuated, the pulling jaws grip the Monobolt stem.

2. An axial pull draws the stem through the shell, expanding it radially. During this phase, the hole is completely filled and work pieces are drawn together.

3. When the stem reaches a pre-determined position within the Monobolt shell, it separates flush with the head profile regardless of work piece thickness. Simultaneously, the stem section remaining in the shell is mechanically locked in place by the Monobolt tool.

Interlock® Dome Head High Strength Rivets

High strength Interlock® rivets feature a positive mechanical locking system that provides superior holding power. This system also guarantees 100% mandrel retention that's visually verifiable. Can be set with Auveco Rivet Gun 11817.

AuvecoPak AP448 Retail Merchandiser

AuvecoPak part numbers are the same as standard Auveco part numbers with an “AP” prefix. Thus AP11146 is the AuvecoPak version of 11146.

AP448S (Starter Merchandiser): One package each of 448 part numbers

AP448L (Large Merchandiser): Two packages each of the 224 most popular items and one package each of the other 224 part numbers for a total of 672 packages.

The AuvecoPak merchandisers (AP448S and AP448L) provide 448 of the fastest moving, most popular automotive body hardware and specialty fasteners.

Each of the 7 panels contains 32 part numbers per side.

The AP448S (Starter Merchandiser) consists of one package each of the 448 part numbers. The AP448L (Large Assortment) includes two packages each of the 224 most popular items and one package each of the other 224 part numbers for a total of 672 packages.

Two header signs identify the AP448 as an Auveco merchandiser, along with the phrase automotive body hardware and specialty fasteners. Eye-catching color scheme and graphics make the merchandiser visually appealing and portray the contents of the merchandiser.

Initial set-up is easy. The panels come “pre-dressed” with the AuvecoPaks already in place. Simply position the top and bottom brackets on a gondola or pegboard wall. Insert the panels into the brackets.

An individual panel measures 6-1/2” (wide) x 17-1/2” (front to back) x 44-1/2” (high). Merchandisers (AP448S and AP448L) fit on a gondola with 48” x 48” of pegboard or on any pegboard wall.

A gondola is not included with the AP448S or the AP448L. Auveco customer service reps can recommend a source for gondolas.

AuvecoPak packages feature, contemporary graphics with all the necessary application and descriptive information in trilingual verbiage (English, Spanish and French-Canadian).

Re-ordering is a breeze, the AuvecoPak part number and UPC-A bar code are on the panel back-up boards beneath each hook. Restocking the merchandiser is also quick and easy with the AuvecoPak packages’ locator codes identifying their specific location on the panels.
