## Red Ring<sup>®</sup> Copper Monoflo<sup>®</sup> Fittings

### Valves and Fittings

#### DESCRIPTION

B&G Monoflo Fittings make possible the use of a single pipe to act as both a supply and return main. These Fittings connect the risers to the main and assure proper diversion of water into each heating unit, whether radiator, convector or baseboard, and regardless of its position in the system.

Except for the 3/4" fitting, they can be installed at either the return or supply riser or both depending on the pressure drop through the side branch circuit and terminal unit, with the other riser connection being a common tee.

Red Ring Monoflo fittings can be used for most installations where cast iron or non-ferrous baseboards, free standing radiation, or convectors are installed.
