Tolex *TOP COAT SANDING*

Utilizing the most uniform abrasive minerals available and state of the art coating technology, Tolex system achieves finishes more even and shallow than any other dry sanding system in similar finish. Tolex's highly effective dry lubrication process allows minimum clogging, thus increasing sanding life and productivity.

■ TOLEX SUPER-TACK (FLEXIBLE SANDING)

In addition to the convenience of use, its extreme flexibility allows Super Tolex to sand both the inside valleys and peaks of orange peel with minimum removal.

■ TOLEX STICKON (BLOCK SANDING)

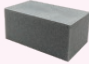

Topcoat sanding will be faster and more efficient as dust nibs are easily identified and located in the first pass of light sanding with Tolex. These imperfections are then quickly and effectively removed by continued sanding on needed areas only. Therefore, oversanding as well as overlooked dust nibs can be easily avoided.

◀ PRESERVE OEM TEXTURE

Due to its extreme flexibility, Super Buflex can polish both the inside valleys and peaks of Orange Peel without eliminating it. The shallow scratch pattern will also prevent over-sanding in situations where the thickness of top coat is a concern.

SUPER BUFLEX INTERFACE PADS ▶

Utilize a special soft "Hook & Loop" system to minimize sanding hotspots and avoid deep scratches. Achieve the most uniform and shallow finish that can be polished in the shortest time.

HIGH-TECH PRODUCT PERFORMANCE GUIDE

As finishing technology continues to advance, quality demands in coated abrasives are higher than ever before, especially for fine sanding. Besides longevity and cutting speed, a uniform finish with shallow scratches is essential for today's New Generation painting technology.

Kovax Hi-Tech DRY sanding products utilize next-generation flexible bonding technology and ultra premium materials to achieve quality standards that exceed today's professional requirements. Since the relationship between cutting speed and the final finish of these new products are dramatically different from traditional sandpaper, the following table will serve as a starting point for understanding or making a selection from these products.

(Note: Cutting speed and Final finish vary depending on the method of sanding and the condition of the sanding surface.)

WATERPROOF ABRASIVE PAPER

■ SILICON CARBIDE WET (CC)

The world's most reputable wet sanding paper for its durability, speed, and extremely uniform abrasive grains. Sharp silicon carbide abrasive grain is resin-over-resin bonded on a highly flexible anti-slip backing that requires no pre-soaking before sanding.

■ ALUMINUM OXIDE WET (AO)

Premium aluminum oxide abrasives and full resin bonded; this heavy-duty waterproof paper is engineered for both machine and hand sanding in achieving a consistent and uniform finish. Extreme durability and fast cutting speed make this paper an ideal choice for the most demanding jobs.

EAGLE MULTI-CELL CURVED FOAM PADS

High quality **Curved Multi-Cell** foam pads have a slow absorption rate and regularly placed pockets that gradually release polish as the operator applies pressure, requiring less polish to complete the task. The interruptions on the face of the Curved Multi-Cell pads also decrease surface tension and contact, thus reducing both skipping and heat-causing friction. Machine washable, tear resistant foam for long life.

EAGLE MULTI-HEX FOAM PADS

Our vibration free, low fatigue **Multi-Hex** foam pads are also self-centering for convenience. The multiple hex pattern on the face of the pad will disperse buffing compound evenly based on the amount of pressure used by the operator, thus reducing grabbing and heat-causing friction. Each Multi-Hex pad will have a different level of cutting or finishing based on the foam structure. The flexible backing plate will also lessen pad stiffness and can adapt to most buffers with 04621 or 02206R back-up plate.
