

# Squeeze'n Light™ Gel Fire Starter

## DIRECTIONS FOR USE IN PELLET STOVE

1

**Place a handful of pellets in the burn pot**

2

**Squeeze a generous amount of fire starter gel into the pile of pellets.**

3

**Mix well.** Use an old spoon or a rigid tool to stir the pellets. Doing so will ensure the gel is well distributed amongst the pellets, allowing better ignition and combustion.

4

**Ignite the gel.**

5

**Wait until the pellets turn into burning embers before closing the door.**

6

**Turn on auger and enjoy your fire.**

**NOTE:** If the fire goes out, wait for vapors to disperse before making a new fire.
