Rubber Pipe Insulation

CLOSED CELL FLEXIBLE ELASTOMERIC FOAM INSULATION

*Excludes Titan(TM) Insulation Tubes and Rubber Insulation Rolls.
See our website for specifications and certifications on these products.

DESCRIPTION

Rubber pipe insulation is an NBR/PVC based closed cell, flexible elastomeric foam insulation. It is environmentally friendly as it is free of CFCs, HFCs, HCFCs, PBDEs, formaldehyde and fibers. An EPA-registered antimicrobial agent is incorporated into the product providing additional protection against mold, fungal and bacterial growth. It is UL GREENGUARD® Gold Certified for low VOC emissions. The product's key physical properties are approved by Factory Mutual.

APPLICATION

Rubber pipe insulation is recommended for applications with service temperatures ranging from -297°F (-182°C) to +220°F (+104°C). For applications below -40°F (-40°C), contact us for support. The product is used to retard heat gain and prevent condensation or frost formation on below-ambient applications, including refrigerant, cold water plumbing, chilled water, and industrial process lines, among others. It can be used with heat tracing tapes. It also retards heat loss from medium hot systems, including hot water plumbing, liquid heating, dual temperature, and solar thermal piping, among others.

OUTDOOR APPLICATION

Rubber pipe insulation is made from a UVresistant elastomeric blend. For severe UV exposure (rooftop applications) or for optimum performance, protective coating or approved jacketing is recommended.

UNDERGROUND APPLICATIONS

Rubber pipe insulation is acceptable for use in buried applications using the same installation principles as above ground applications. For lines above the water table, use a clean fill such as sand (3"-5" layer) to protect the insulation before backfilling. For optimum performance, the lines should be encased in a conduit to protect them from problems associated with ground water intrusion and compaction. If a conduit is not used, the insulation thickness should be increased by one thickness size to compensate for compaction.

INSTALLATIONS

Rubber pipe insulation is flexible (even at low temperatures), durable (nonfracturing and skin is resistant to tearing from handling and environment), safe to handle (non-dusting and non-abrasive), and lightweight for an efficient installation. It is recommended that insulation is installed on non-operational systems with clean, dry surfaces in ambient conditions between 40°F and 100°F. Properly sized insulation tubing can be slid over piping (tubing should be pushed, not pulled) or, when applied to existing lines, can be slit lengthwise (using a sharp, non-serated knife) and fitted into place. All seams, butt joints, termination points and open ends should be sealed with an approved contact adhesive, making sure both surfaces to be joined are coated. Longitudinal seams should face downward and vapor stops should be installed as needed. Fittings (elbows, tees, p-traps) can be field fabricated from insulation tubes. ASTM C1710, Installation Guide for Flexible Closed Cell Foams should be used as comprehensive installation guides.

RESISTANCE TO MOISTURE VAPOR FLOW

The expanded closed cell structure and unique formulation inherently resists moisture vapor intrusion and is considered a Class 1 vapor retarder per ASHRAE. For most indoor applications, rubber pipe insulation needs no additional protection. Additional vapor barrier protection may be necessary when installed on cold surfaces that are exposed to continuous high humidity.

FLAME AND SMOKE RATING

Rubber pipe insulation in wall thicknesses of 2" (50 mm) and below has a flame spread rating of 25 or less and a smoke development rating of 50 or less as tested to ASTM E84, "Surface Burning Characteristics of Building Materials". It is acceptable for duct/plenum applications, meeting the requirements of NFPA 90A/B. Numerical flammability ratings alone may not

Titan™ Seamless UV Resistant Rubber Pipe Insulation

- Closed cell elastomeric foam NBR/PVC tube with flexible polymeric jacketing material.
- Non-slit for slide-on applications
- For use on HVAC/R, commercial, and industrial process piping and equipment
- Ideal for outdoor applications: UV resistant, tear resistant, weather resistant
- 1-Step Install: No field applied protective coating or additional jacketing required
- High resistance to moisture vapor intrusion; low thermal conductivity
- Patent Pending
- CARTON QUANTITIES ONLY

Poly Pipe Insulation

CLOSED CELL FLEXIBLE FOAM INSULATION

UNDERGROUND APPLICATIONS

Poly pipe insulation is acceptable for use in buried applications when installed above the water table. Below the water table, lines must be encased in a conduit to protect them from problems associated with ground water intrusion and compaction.

INSTALLATIONS

Poly pipe insulation is flexible (even at low temperatures), durable (non-fracturing and skin is resistant to tearing from handling and environment), safe to handle (non-dusting and non-abrasive) and lightweight for an efficient installation. It is recommended that insulation be installed on nonoperational systems with clean, dry surfaces in ambient conditions between 40°F and 110°F. Properly sized tubing can be slid over piping and copper fittings or can be applied to existing lines using the seam-seal product. All butt joints, termination points, and open ends should be sealed with an approved contact depending on the requirements of the application, making sure both surfaces to be joined are coated. Longitudinal seams should face downward and vapor stops should be installed as needed. Fittings (elbows, tees, and p-traps) can be field-fabricated from insulation tubes and sheet. ASTM C1710, Installation Guide for Flexible Closed Cell Foams should be used as comprehensive installation guides.

RESISTANCE TO MOISTURE VAPOR FLOW

The closed cell structure and unique formulation inherently resists moisture vapor intrusion. For most indoor applications, poly pipe insulation needs no additional protection. Additional vapor barrier protection may be necessary when installed on cold systems located in high humidity environments.

FLAME AND SMOKE RATING

Poly pipe insulation in wall thicknesses of 1" (25mm) and below has a flame spread rating of 25 or less and a smoke development rating of 50 or less when tested per ASTM E84, "Surface Burning Characteristics of Building Materials". Numerical flammability ratings alone may not define the performance of products under actual fire conditions. They are provided only for use in the selection of products to meet specified limits.

SPECIFICATION COMPLIANCE

- ASTM C 1427 Type I Pipe, Type II Sheet (Specification for Extruded Preformed Flexible Cellular Polyolefin Thermal Insulation in Sheet and Tubular Form.)
- ASTM E84 25/50 rated (to 1") – tested according to UL 723. NFPA 255 NFPA 90A/B – Acceptable for plenum applications
- UL 94 HF-1 Flammability Classification (#E300774)
- Greenguard Gold Certified
- Contains no halogens
- Fiber Free
- Non-dusting

C

DESCRIPTION

Poly pipe insulation is a polyethylene based closed cell, flexible foam insulation meeting the requirements of ASTM C 1427. It is environmentally-friendly as it is free of CFCs, HFCs, HCFCs, PBDEs, formaldehyde and fibers. Poly pipe insulation contains no halogens. Poly pipe insulation has excellent thermal, physical, and chemical resistance properties as exhibited by its low thermal conductivity and low water absorption and water vapor permeability values.

APPLICATION

Poly pipe insulation is recommended for applications with service temperatures ranging from -200°F (-129°C) to +200°F (93°C). The product is used to retard heat gain or loss and prevent condensation on below-ambient applications including cold water plumbing, chilled water, and industrial process lines, among others. It also can be used to prolong the time to freezing and can be used with heat tracing tapes. It also retards heat loss from medium hot systems, including hot water plumbing. Poly pipe insulation is used in both residential and commercial applications.

OUTDOOR APPLICATION

Poly pipe insulation is designed for indoor or outdoor use. For UV exposure (rooftop applications) Poly pipe insulation must be protected with an approved coating or jacketed.

Semi-Slit Pipe Insulation

- Polyethylene-based closed cell, flexible foam insulation
- Semi-slit for retrofit applications
- For use on hot or cold plumbing lines
- For outdoor use, paint with a high quality exterior acrylic latex paint
- High resistance to moisture vapor intrusion; low thermal conductivity
- CARTON QUANTITIES ONLY

MADE IN THE USA

Specifications:

Temp Range: -200°F (-129°C) to +200°F (93°C)
 Flame/Smoke: ASTM E84 25/50-rated (to 1")
 Water Vapor Permeability: <0.05 perm-in
 Density: 1.5 +/- 0.5 lbs/cubic foot
 Mold growth: None
 Ozone Resistance: Good

Plumbite® Push On Water Heater Connector

- Heat-free method for joining copper, CPVC, PEX or PE-RT tubing
- Ideal for piping systems service and repair
- No soldering, glue, heat or external tools required to join the pipe
- Secure connection and seal with stainless steel gripper ring and EPDM o-ring
- Maximum temperature is 180°F and maximum pressure is 200 PSI
- Can be disassembled and re-used using the disassembly tool (sold separately)
- Standards/Certifications: NSF/ANSI 61, NSF/ANSI 372, NSF/ANSI 14, ASSE 1061, UPC, cUPC and IAPMO
- Lead free

Gas Testing Equipment

- Large 4" face
- Class 1A gauge
- 5 lb. gas test gauge/15 lb. gas test gauge
- 1/10 # increments
- Inches of mercury scale
- External set hand
- Bellows design
- 1/4 NPT connection
- Gauge meets all requirements of the City of Houston code Word 94-108, Section 1204.3.2, revised January 18, 2001
- Individually boxed
- ALL SALES FINAL; NO WARRANTY; NO RETURN

PART NO.	DESCRIPTION	CTN/MSTR
G60055	15 lb. gas test gauge only	1/20
G60005	5 lb. gas test gauge only	1/20

Liquid Filled Pressure Gauge

- Polished 304 stainless steel case with vent plug
- 2-1/2" face (glass)
- +/- 1.5% accuracy
- Glycerin filled for use where vibration or pressure pulsation occur
- -50 to 150°F operating temperature
- 1/4" NPT bottom connection
- Individually boxed

Twist To Lock Plastic Fittings

- Reduced installation time
- Ideal for service and repair
- "O-ring" design for leak-free seals
- Working temps and pressure:
180PSI@68°F, 100PSI@150°F, 45PSI@180°F

INSTRUCTIONS FOR USE

To Connect: Squarely cut tubing or pipe to desired length, removing all burrs. Push fitting onto the end of tube or pipe. Fitting will grip before it seals. Ensure that tubing or pipe is pushed into the fitting until the end is fully seated into the internal tube stop.

To Lock Fitting: Twist the screw cap until colored line is no longer visible.

Plastic inserts are required for plastic pipe connections in heating installations. It is recommended to use pipe inserts for plastic pipe connections in standard residential plumbing (hot and cold water) installations.

Plastic Push On Fittings

- Quick and easy installation
- Very durable and fatigue resistant
- Manufactured from safe, non-toxic materials meeting the requirements of the US FDA, WRAS, ANSI/NSF-51, 61 and SK Zert
- All connections can be assembled and disassembled repeatedly

1. Cut the part of the tube to be inserted into the fitting to plane the end.

2. Make sure to use a clean tube without any foreign material or cracks.

3. When inserting the tube, remove any obstructions before fully inserting the tube. Make sure the tube is fully inserted.

4. Inserting the tube into the fitting only takes moderate force. The tube or fitting should not be scratched or damaged in the process, as this is the main cause for water leaks later on.

5. To make sure that the fitting is properly connected to the tube, pull it once. After pulling, insert a spanner under the collet and push the tube into the fitting once more for a complete insertion.

6. When no play is desired for the fitting and tube, use our company's LC to eliminate the play of the fitting.

7. Make sure to completely eliminate pressure before disassembling the fitting.

8. When disassembling the tube, push the clip in direction to the main assembly and then pull the tube out for easy disassembling.

9. Fittings and tubes can be reused.

INSERT FITTINGS VS HOSE BARBS?

Insert Fittings only fit polyethylene plastic pipe (water service pipe).

Hose Barbs are designed to fit the inside diameter of various rubber hose sizes.

Both types of fittings are normally secured with hose gear clamps.

JONES STEPHENS LEVELBEST ADJUSTABLE DRAINS

LevelBest drains allow for adjustment to floor level *after* the concrete is poured.

- **LevelBest** has industry standard IPS threads that are compatible with most adapters and drain bodies.
- **LevelBest** is compatible with most plastic and brass spuds used in the industry.
- **LevelBest** includes a spacer ring that can be used with brass spuds.
- **LevelBest** is compatible with PVC, ABS or CAST IRON drains and cleanouts.
- **LevelBest** can be used with tile rings.

REMOVABLE DOME CAP
REMOVE WITH PLIERS OR WATER METER KEY AFTER THE CONCRETE IS POURED

SPACER
INCLUDED FOR BRASS SPUDS

ADJUSTABLE
ALLOWS STRAINER ADJUSTMENT TO FLOOR LEVEL AFTER THE CONCRETE IS POURED

HOW IT WORKS

1

Set drain with LevelBest rough-in adapter at concrete pour level. The height can be adjusted by tightening or loosening the adapter.

3

After concrete pour is complete, remove the temporary cap with pliers or water meter key as shown on the label. The cap eliminates the need for duct tape or other protective coating on the cover or strainer. The strainer spuds or the cleanout spuds are installed after the pour.

2

The concrete should be poured so that it is level to the top of the LevelBest adapter. The cap of the LevelBest allows the slab to be finished easily without using a hand trowel.

4

Install the spud and strainer and adjust to meet the floor covering. The adjustment of the spud eliminates the need to break and repair the floor when the concrete is poured too high. Use grout or silicone to seal.

- Low profile for first and second floor installations
- Beveled edge allows for recessed installation
- Reversible clamping ring for additional 1/2" height adjustment
- Brass inserts ensure secure clamping of membrane
- Dual weeps holes
- Recessed sump area for added drainage
- Use D50998 tailpiece extension when additional height is needed
- Complies with new construction drain test requirements
- Covers both the wet test from the shower, as well as pressure test from above floors
- Before testing, the spud should be threaded down to its lowest point making contact with the plug
- Plug should make complete contact with drain opening
- Remove test plug with pliers and discard

• Use **D50998** Spud Extension (listed below) when additional height is needed

HOW IT WORKS!

Concrete Floor Application

The concrete should be poured so that the pipe stack is above the finished surface.

After concrete is complete, use an EZ Stroke pipe saw to cut flush with concrete. Then, use a socket saver or inside pipe cutter to trim pipe 3/8" below concrete surface.

The inside pipe fit drain/cleanout can easily be glued into the pipe creating a level surface once the strainer is installed. No chisel or tape needed!

Tile Floor Application

The concrete should be poured so that the pipe stack is above the finished surface.

After concrete is complete, use an EZ Stroke pipe saw to cut flush with concrete. The inside pipe fit drain/cleanout can easily be glued into the pipe.

Lay tile to the edge of the cover or strainer. No chisel or tape needed!

DESCRIPTION: Couplings consist of gasket and shield assemblies, the shield assemblies have four or six clamps depending on size. The clamps are fastened with eyelets to the bi-directional corrugated shield.

MATERIALS: Steels used in couplings are stainless steels. Shields, bands and housings are AISI 304. Screws and eyelets are ASI 305. Gaskets are neoprene rubber.

SPECIFICATIONS: Couplings conform to CISPI 310. Factory Mutual EN 1618. Couplings comply with ASTM C564, ASTM 1277, IAPMO file #3198, Commonwealth of Massachusetts CMR-248 and City of New York MEA 253-98-E. Gaskets are made from an elastomeric compound that meets the requirements of ASTM C564.

Larger Hex Head Screw: The new 3/8" hex head screw is designed to apply the full load of 80in/lbs. of insulation torque to the band/shield assembly.

Floating Eyelet Design: "Floating eyelets" fasten the clamps to the shield, allowing the clamp band and shield to move independently. This freedom prevents the shield from crimping during tightening, which can lead to leakage later on.

Patented Bi-directional Shield Design: Our unique shield design employs bi-directional corrugations for maximum transfer of pressure from the clamps the gasket. This patented shield design adjusts to differences in the circumference and outside diameters for the pipes being joined. This eliminates gasket wrinkling and thereby eliminates leak paths. These parallel and transverse patterns on the gasket and pipe work to avoid pullout failures and provides a positive, reliable seal.

Mechanical Interlocking Clamp Design: IDEAL clamps feature a one-piece screw housing that mechanically interlocks the housing to the band. This one-piece housing design eliminates leak paths that can occur in staked or welded clamps.

Green Shield: The distinctive green shield quickly identifies the newly re-engineered IDEAL Heavy-Duty Couplings.

Specially Beaded Gaskets: The heavy-duty coupling utilizes a specially beaded gasket that mates with the shield and clamping forces for superior sealing pressure and holding power. IDEAL gaskets comply with ASTM C564.
