

NIBCO®

AHEAD OF THE FLOW®

Butterfly Valves

Business-to-Business Solutions

Look to NIBCO for technology leadership.

The velocity with which e-business evolves demands that new products and services be continuously developed and introduced to keep our customers at the center of our business efforts. NIBCO provides an entire suite of business-to-business solutions that is changing the way we interact with customers.

NIBCOpartner.comsm is an exclusive set of secure web applications that allow quick access to customer-specific information and online order processing. This self-service approach gives you 24/7 access to your order status putting you in total control of your business.

Real time information includes:

- Online order entry
- Viewable invoices & reports
- Inventory availability
- Current price checks
- Order status
- Online library of price sheets, catalogs & submittals

Electronic Data Interchange (EDI) makes it possible to trade business documents at the speed of light. This technology cuts the cost of each transaction by eliminating the manual labor and paper-work involved in traditional order taking. This amounts to cost-savings, increased accuracy and better use of resources.

With EDI, you can trade:

- Purchase orders
- PO Acknowledgements
- Invoices
- Product activity data
- Advanced ship notices
- Remittance advice

Vendor Managed Inventory (VMI), a sophisticated service for automated inventory management, reduces your overhead by transferring inventory management, order entry and forecasting to NIBCO. This is an on-going, interactive partnership with NIBCO.

Through automation, VMI brings results:

- Improves customer service
- Optimum inventory efficiencies
- Better forecasting
- Cuts transaction costs
- Peace of mind
- Relief from day-to-day management

Butterfly Valves

Factors to Consider When Choosing Butterfly Valves

Operating Life

Butterfly valves can provide many maintenance free cycles and still accommodate "bubble tight" shut off.

Pressure Drop

Energy costs go up with **excessive** pressure drop. The valve or valves are but one factor in a piping system that contribute to pressure drop. Of equal concern are these factors:

- Flow area of piping.
- Friction loss against pipe walls.
- Change of flow direction via fittings.

Butterfly valves have flow characteristics three times better than globe valves and approximately 75% of an equivalent size gate valve.

Versatility

Butterfly valves can be used for on/off service and throttling/balancing. They are superior in "versatility" as compared to a gate or globe valve. Butterfly valves have a wider range of chemical resistance due to the trim options and choice of elastomeric liners.

Weight

Installation dollars saved with lightweight butterfly valves as compared to heavyweight cast iron valves; i.e. a 10" butterfly may weigh 55 pounds, whereas a 10" iron gate may weigh 490 pounds. This can be an important savings when it is calculated over an entire system. The heavier the system, the stronger the pipe hangers, and the more expensive they become. So by considering the weight of a valve one can also **reduce** piping system costs.

Physical Size

Butterfly valves take up approximately 1/6 the space of a gate valve. Every cubic foot of a building costs money.

I.E.: 10" butterfly is about 21" high
10" iron gate is about 43" high

Bubble Tight Shut-Off

Gate and globe (metal to metal) seats cannot provide bubble tight shut-off. Resilient seated butterfly valves are bubble tight by design.

Ease of Operation

Butterfly valves offer 1/4 turn (90°) open to close. Gates and globes require multiple turns to open and close. Ease of opening or closing means that butterfly valves can employ less expensive operators.

Cost

A butterfly valve is generally 40% the cost of an iron gate valve, not only low initial cost but low installation costs also.

Maintenance

Properly installed butterfly valves are virtually self cleaning and are less susceptible to failure due to trash material in the line.

2000/3000/5000 Series Butterfly Valves

*** Threaded Collar Bushing** for positive stem retention (blow-out proof)

Body and Stem O-ring Seals of EPDM, Buna-N or Fluorocarbon.

Extended Neck for insulation up to 2".

Molded-in Liner fully supported by valve body at flange seals. Eliminates leakage between body and liner as in cartridge or boot type liners. Provides dead-end service without the need for a flange on the downstream side.

High-Strength Stainless Steel Stem materials with one-piece thru-disc design.

Upper and Lower Bushings are standard for smooth valve operation.

Streamlined Spherical Disc with high flow capacity.

Internal Stem/Disc Drive eliminates the need for pins or bolts which create additional leak paths, turbulence in the waterway and/or flow reduction.

Ductile Iron Body more durable than cast iron (reduces breakage).

"Blind-Hole" lower bushing prevents leakage.

A High-Pressure Resilient-Seated Butterfly Valve Featuring:

- Pressure rating to 250 psi for 3000 Series, 285 psi for 5000 Series, vacuum to 28" Mercury
- Wide choice of materials to suit customer's application
- Bubble-tight shutoff at full pressure rating
- 200/232/250 bi-directional dead end service rating without a downstream flange required

***Collar bushing is non-removable.**

Operation

Bare shaft, lever-lock flow control handle, worm gear operator, electric and pneumatic actuators

Body Styles

Tapped full lug or wafer

250 PSI Butterfly Valves

Ductile Iron Body • Extended Neck • Geometric Drive • Molded-In Seat Liner • Lug and Wafer Style

Sizes 2" through 12"

Install between Std. ASME Class 125/150 flanges.

Lug Style 250 PSI bi-directional dead end service rating without a downstream flange required.

THIRD PARTY CERTIFIED BY QAI TO MEET MSS SP-67 STANDARD •
U.S. COAST GUARD "CATEGORY A" • CERTIFIED LEAD-FREE* BY
TRUESDAIL LABS TO ANSI 372

250 PSI WWP UL/FM Butterfly Valves

Designed for normally closed position monitoring

Fire Protection Valve • Lug or Wafer Style Body • Factory Mounted Monitoring Switches • Mates with C.I. Class 125 and Steel Class 150 Flanges

250 PSI/17.2 bar non-shock cold water

THIRD PARTY CERTIFIED BY QAI TO MEET MSS SP-67 STANDARD •
UL/ULC LISTED** • FM APPROVED** • CERTIFIED LEAD FREE BY TRUESDAIL LABS
2½" - 8" UL LISTED FOR INDOOR AND OUTDOOR SERVICE

Warning: these valves are not to be used between the water source and sprinkler head.

MATERIAL LIST

PART	SPECIFICATION
1. Stem	Stainless Steel ASTM 582 Type 416
2. Collar Bushing	Brass ASTM B16
3. Upper Bushing	Copper Alloy CDA 122
4. Stem Seal	EPDM
5. Body Seal	EPDM
6. Disc	Ductile Iron ASTM 395 (Nickel Plated)
7. Liner	EPDM
8. Lower Bushing	Copper Alloy CDA 122
9. Nameplate	Aluminum
10. Body	Ductile Iron ASTM A536
11. Gear Operator	Cast Iron and Steel
12. Indicator Flag	Cast Iron
13. Handwheel	Cast Iron

Note: wafer body will mate with ANSI or ISO flanges. O.D. of wafer body notched to fit ISO bolt circle.

For dead-end service use lug style (rated 250 PSI for this service).

Comes with two factory mounted internal supervisory switches. Use switch Figure No. TS-4. See page 4 of I & M manual for installation & wiring instructions

285 PSI Butterfly Valves

Ductile Iron Body • Extended Neck • Geometric Drive • Molded-In Seat Liner
• Lug and Wafer Style (not intended for air lines)

Sizes 2" through 12"

Install between Std. ASME Class 125/150 flanges.
285 PSI Bi-directional dead end service with no need
for a downstream flange.

THIRD PARTY CERTIFIED BY QAI TO MEET MSS SP-67 STANDARD •
CERTIFIED LEAD-FREE* BY TRUESDAIL LABS TO NSF/ANSI 61 AND 372

Large Diameter Butterfly Valves

LD1000/2000 Series

Ductile Iron

Lug body

EPDM or Buna-N liner materials

- 14" thru 48" size range
- 150/200 PSI WOG
- Bubble tight shut off at full rated pressure
- Bidirectional dead end service
Sizes 14"- 24" 150 psi
Sizes 30" - 48" 100 psi
- Extended neck for 2" of insulation
- Aluminum bronze, 316SS, nickel plated ductile iron disc
- 416 stainless steel stem
- Designed to meet MSS SP-67 standard

Visit our website for the most current information.

150 PSI Butterfly Valves

Ductile Iron Body • Cartridge Liner • Lug Style

Sizes 14", 16", 18", 20", and 24"

Install between Std. ASME Class 125/150 flanges. 150 PSI bi-directional dead end service rating without a downstream flange. Do NOT install between AWWA C115/A21.5 type flanges.

Lug or wafer body

- EPDM or Buna-N liner materials
- 2" thru 12" size range
- 200 PSI CWP
- Bubble tight shut off at full rated pressure
- Aluminum bronze, nickel plated ductile iron disc, or nylon coated ductile iron disc
- 416 stainless steel stem

Note - Stem extensions for this butterfly series are not available.

Visit our website for the most current information.

200 PSI Butterfly Valves

Cast Iron Body • Extended Neck • Geometric Drive • Molded-In Seat Liner • Lug and Wafer Style

Sizes 2" through 12"

Install between Std. ASME Class 125 flanges†.

Lug Style 200 PSI bi-directional dead end service rating without a downstream flange required.

THIRD PARTY CERTIFIED BY QAI TO MEET MSS SP-67 STANDARD •

Grooved Butterfly Valve

GD-4765 Series GD-4865 Series

Polyamide Coated Ductile Iron body

Elastomer encapsulated disc (EPDM or Buna-N)

- Maximum temperature rating 200°F EPDM Disc and 180°F with Buna Disc
- 416 stainless steel stem
- 300 PSI WOG 2" thru 10"
- 175 PSI WOG 10" UL/FM
- UL & ULC listed, FM approved
- 2½" thru 10" UL listed for indoor and outdoor service
- UL/FM version accepts internal supervisory switches
- Designed to meet MSS SP-67 standard
- End connection per AWWA C606

Visit our website for the most current information.

300 PSI Grooved End Butterfly Valves

Polyamide Coated Ductile Iron Body • Extended Neck • Elastomer Encapsulated Disc • Grooved Mechanical Style • Maximum Temperature Rating of 200°F EPDM Disc and 180°F Buna Disc • Grooved End Compatible with IPS pipe

Sizes 2" through 10"

DESIGNED TO MEET MSS SP-67 STANDARD

2 Stem Adapter	Steel
3 Gear Operator	Cast Iron and Steel
4 Retaining Ring	Carbon Steel
5 Cartridge Seal	Brass ASTM C36000
6 Stem Seals	EPDM
7 Upper Stem	Stainless Steel ASTM A582 Type 416
8 Upper Bushing	Steel with PTFE Lining
9 Body	Ductile Iron ASTM A395 with Polyamine Coating
10 Disc	Ductile Iron ASTM A536 with EPDM Encapsulation
11 Lower Bushing	Steel with PTFE Lining
12 Lower Stem	Stainless Steel ASTM A582 Type 416
13 Handwheel	Cast Iron

Note: Comes with two factory mounted internal supervisory switches. Uses NIBCO model T1447532 PP switch. See I & M manual for installation and wiring instructions.

Ground post or wall post not available. Normally closed monitored.

4 Valves in one

FC-2000 Series FD-5000 Series

Sizes 2"-10"

Your *Best* Valve Replacement Option

NIBCO® flanged butterfly valve dimensionally replaces the:

- Gate Valve
- Ball Valve
- Plug Valve
- Spooled Butterfly Valve

Visit our website for the most current information.

Note: Polyamide coating maximum temperature 200°F

200 PSI Flanged End Butterfly Valves

Polyamide Coated Cast Iron Body • Extended Neck • Cold form Stem Drive
 • Elastomer Encapsulated Disc • Flanged Ends • Maximum Temperature 200°F with EPDM Only • ASME B16.10 Face-to-Face Dimensions

Patent pending

Sizes 2" through 10"

DESIGNED TO MEET MSS SP-67 STANDARD

MATERIAL LIST

PART	SPECIFICATION
1. Upper Stem	Stainless Steel, ASTM A582 Type 416
2. Upper Bushing	PTFE over Porous Bronze, Steel Backed
3. O-Ring	EPDM or BUNA-N
4. Body	Cast Iron ASTM A126 Class B with Polyamide Coating
5. Disc	Ductile Iron ASTM A395 with EPDM or BUNA-N Encapsulation
6. Lower Bushing	PTFE over Porous Bronze, Steel Backed
7. Lower Stem	Stainless Steel, ASTM A582 Type 416
8. Dust Plug	PVC
9. Nameplate	Aluminum

Class 125 flange ends

Polyamide coating has NSF certification

NOT RECOMMENDED
 FOR STEAM SERVICE

HIGH PERFORMANCE BUTTERFLY VALVE

LCS-6822 (Class 150)

LCS-7822 (Class 300)

APPLICATIONS

Ideally suited for commercial, industrial, and mechanical HVAC services. Use in other applications must be approved by the manufacturer

- Heating hot water
- Condenser water
- Glycol
- Chilled water
- Compressed air
- Steam rated - 2" - 12" 150 psi for on/off applications and 50 psi modulating
- Vacuum to 27" Hg
- Chemical process
- Isolation and throttling
- Domestic water

MATERIALS & CONSTRUCTION

- Body constructed of carbon steel
- Stainless steel disc and stem
- Seats of reinforced PTFE for exceptional chemical and heat resistance
- Welded disc pins
- Silicon is not used in the manufacture of this valve

DESIGN CRITERIA

- MSS SP-68 (Design)
- MSS SP-25 (Markings)
- API-609 Seat pressure/temperature ratings/blow-out proof stem
- ASME/ANSI B16.34A, body pressure/temperature ratings
- ASME/ANSI B16.5 flange dimensions
- ISO 5211, actuator mounting top works
- ANSI Class 150 and Class 300
- Dual offset design

**Class 150
Pictured**

FEATURES

- Powder coated epoxy finish
- One-piece stem
- Direct mount actuation
- Live loaded adjustable packing with unique flush-mounted packing gland
- Integrally cast disc-stop
- Dual offset design
- Blow-out proof stem
- Uni-directional dead end service (Arrow on body indicates flow direction)
- Maximum operating temperature 400°F at 100 psi
- 100% production tested per MSS SP-68

WARNING: This product can expose you to chemicals including lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Visit our website for the most current information.

NOTES

1. Replacement Gear Operators includes Handwheel, Handwheel Pin, 4 Cap Screws, 4 Lock Washers, Key and Stem Bushing (if required) for mounting to BFV.
2. Stem Seal Kit includes Upper Packing Set, Packing Retainer, and Lower Body Cap Seal.
3. Lever Handle Kit includes Handle, Throttle Plate, Lockwashers, Bolts, and Bushing (if required).

Lever-Lock Operator (Standard) LD/WD2000/3000/5022

The lever-lock handle and throttling plate provide throttling notches every 10° for excellent manual control in balancing up to 90° or shut off service. The valve may be padlocked in any one of the positions including opened or closed by virtue of a locking hole located in the handle and lever.

8"	T117831
Handle and Throttle Plate	

Position-Lock Operator (Optional) LD/WD2000/3000/5022

The position-lock can be used to set the valve in any position or as a memory stop so the valve may be reopened to the previous position. The valve may be padlocked in full open or full closed position.

Ordering: Sold as a field retrofitable kit only.

Butterfly Valves Options and Accessories

Gear operator options and accessories (2" through 12" 2000/3000/5022 Series commercial valves).

2" Square Operating Nut

Memory Stop

Flag Indicator

Cast Iron Gear Operator

The NIBCO® butterfly valve can be provided with heavy-duty operator and indicator. Recommended for valves 8" and larger, for trouble-free operation in all moisture and weather conditions (not submersible). Operator is a self-locking worm gear type.

Equipped with adjustable stops at open and shut positions. Ordering: Specify by adding (-5) to Fig. No., i.e., WD2000-5. Babbit Sprocket may be added to handwheel. See below for sizing information. Available options: Memory Stop Gear Operator Kit, 2" Square Operating Nut, Flag Indicator and Handwheel for GO.

Notes:

1. Gear operator comes with handwheel. Larger sizes come with handwheel unattached. Pin is taped to handwheel.
2. Stem adapter bushing must be ordered separately when needed for smaller size valves.
3. All other accessories must be ordered separately.
(Sprocket rim, square operator nut, flag indicator & memory stop kit.)

Visit our website for the most current information.

Butterfly Valves Options and Accessories

Stem Extensions

Stem extensions can be furnished to permit remote operation of butterfly valves in any required length. The top flange of an extension stem, plug shaft diameter, and distance across flats on plug shaft are the same size as the valve selected. This allows interchangeability of gear operators, actuators, and adapter bushings from valve mounting flange to extension stem top flange. When ordering, specify valve size, figure number, and the exact distance from the valve flange to the top of extension flange (customer-specified length shown at right). Stem extensions are available in lengths up to 10 feet. For stem extensions in excess of 10 feet consult factory.

See NIBCO Fire Protection catalog for wall post and ground post information.

Some High Performance Valves will require stem extensions for adequate chain clearance. Contact NIBCO Tech Services.

MATERIAL LIST

DIMENSIONS

SIZE	A	B	C
2"-12"	2.88	1.125	1.12
14"-24" consult NIBCO Technical Services			

NOTE: extension length limited by "B" dimension

Adjustable Sprocket Rim

The Babbitt Adjustable Sprocket Rim will provide for remote operation of butterfly valves in high, normally out-of-reach locations. When ordering specify either the sprocket and chain number or the NIBCO valve figure number and size. The chain length must also be specified. (Chain length is determined by Height x 2 + 2 ft.)

Sprocket Rim Retaining Harness

Babbitt Adjustable Sprocket Rims installed in overhead locations may require a secondary retention harness. It is the responsibility of the installer to determine need for such devices. For those locations use The Babbitt Safety Wheel Cap Kit. The kit contains a ductile iron cap, four stainless steel clamps, a stainless steel cable, and screws to secure the sprocket and hand wheel to a nearby pipe or structural member.

No Silicone Used - Silicone Free Issue

All butterfly valves may incorporate the use of silicone in either grease or aerosol form during the assembly. LD/WD/GD series butterfly valves can be special ordered as "Assemble-Dry" without test. These valves will not be assembled using silicon in the form of grease or aerosol spray.

Note: Even though provisions are made to assemble valves and not incorporate the use of silicone lubricants, the potential for it to be present as air-borne particles prevents us from certifying that our valves are 100% silicone free

Specifications

NIBCO® butterfly valves are designed and manufactured to give maximum performance on recommended service at the lowest possible initial and upkeep cost. They are designed to meet standards, codes, and/or specifications, as noted.

American Petroleum Institute

API-609 DESIGN

Manufacturers Standardization Society of the Valve and Fitting Industry, Inc.

MSS SP-25, MSS SP-67 (shell test performed upon request), MSS SP-68

United States Coast Guard — CG190

Now called "CIMDTINST — M16714.3"

"Equipment list"

"Items approved, certified or accepted under Marine Inspection and Navigation Laws"

NIBCO valves, fittings and flanges are listed in this document.

Code of Federal Regulations Title 46 Shipping Parts 41 to 69

The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Regulations by the Executive Departments and Agencies of the Federal Government.

This regulation is constantly revised to reference the latest ANSI, ASTM & MSS Standards _____.

NIBCO 2000 and 3000 services have been designated as suitable for Category A service.

NAVY — APL, CID, NSN

"Department of the Navy"

"Navy Ships Parts Control Center"

Mechanicsburg, PA

The Department of the Navy, when using standard commodity type valves, assigns APL-CID numbers to each individual valve manufactured by a company.

Valves of the same figure number, but of different size get different CID numbers.

The (APL) Allowance Parts List, (CID) Code Identification Numbers and (NSN) National Stock Numbers are used by the Navy in the Parts Control Center to order replacement valves or parts of valves that are installed on board United States Navy vessels.

When a Navy vessel is being built, the shipyard doing the construction must apply to the Parts Control Center for CID numbers for all valves before the Navy will accept delivery of the vessel.

On many NIBCO valves, the CID and NSN numbers have been assigned. Consult NIBCO for more information.

Visit our website for the most current information.

Specifications (continued)

American Bureau of Shipping — Rules for Building

The American Bureau of Shipping states in Article 36.15.1; All valves are to be constructed and tested in accordance with a recognized standard, such as ANSI, MSS or other, acceptable to the Bureau. They are to bear the trademark of the manufacturer legibly stamped or cast on the exterior of the valve, as well as the pressure rating class for which the manufacturer guarantees the valve will meet the requirements of the standards.

The following NIBCO butterfly valves are manufactured in facilities approved by ABS for marine service: LD or WD 2000 and 3000 series.

ABS Certificate No.: 00N09621-X Manufacturers Federal Code: NIBCO — 12168

Lloyd's Register of Shipping

NIBCO is an approved manufacturer of grey and ductile iron butterfly valves.

Det Norske Veritas

NIBCO® DI Butterfly valves are in compliance with DNV Rules for classification of ships and mobile offshore units. DNV standards for Certification 2.09 No. 101. approved for fresh water, sea water, sanitary water, water ballast, cargo oil transfer and bilge lines

Sample Butterfly Valve Specification

Line Control Valves 2" or larger

Butterfly Valves: Valve shall be full lug or wafer body style. Valves designed to comply with MSS SP-67 Standard. The valves shall be rated at least 200 PSI (2" - 12") and 150 PSI (14" - 48") bi-directional differential pressure. **Body** to have 2" extended neck for insulation and **shock resistant ductile iron**. Valves to have aluminum bronze disc and **molded in or cartridge seat** of EPDM rubber. Stem shall be 400 series stainless steel. Top and bottom stem bushings of dissimilar material are required with a positive stem retention mechanism. Sizes 2" - 6" shall be lever operated with a 10 position throttling plate; sizes 8" and larger shall be gear operated. **Lug style valves shall be capable of providing bi-directional "Dead End Service" minimally at 200 PSI (2-12"), 150 PSI (14"-24"), 100 PSI (30"-48") without the need for down stream flange.**

Acceptable valves:

NIBCO LD-2000 (2" - 12"), LD-1000 (14" - 48")

Visit our website for the most current information.

Flow Data

C_v Values for Valves

Liquid Flow:

$$Q = C_v \sqrt{\frac{\Delta P}{S}} \quad \text{or} \quad \Delta P = S \left(\frac{Q}{C_v} \right)^2$$

where... Q = flow rate (gallons per minute)
 ΔP = pressure drop across valve (psi)
 S = specific gravity of media

This equation is good for turbulent flow and for liquids with viscosities near that of water.

(C_v is defined as the flow in GPM that a valve will carry with a pressure drop of 1.0 psi when the media is water at 60°F.) (The specific gravity of water is 1 (one).)

Gas Flow:

$$Q = 1360 C_v \sqrt{\frac{\Delta P \times P_1}{S T}}$$

where . . . Q = gas flow (SCFH—std. cu. ft/hr)
 S = specific gravity of gas (air = 1.0)
 T = temp—degrees Rankine (°F + 460)
 ΔP = pressure drop across valve (psi)
 P₁ = upstream pressure (psia) absolute

NOTE: ΔP must be less than .5 P₁. (Flow is critical when ΔP is greater than .5 P₁.)

									Throttling Factors For throttling use with disc partially open. Multiply Cv by factor. NOTE: Gate Valves are not throttled.

									WARNING The Fluid Flow factors contained herein are calculated values. They are, therefore, approximations and cannot be used for highly critical flow or pressure drop calculations. For very precise flow measurements, tests must be conducted on any valve mentioned within this catalog. Throttling of ball valves is not recommended when valves are less than 45° open.

DIMENSIONAL REQUIREMENTS OF FLANGE/ PIPE CONNECTIONS FOR NIBCO® RUBBER SEATED LUG & WAFER STYLE BUTTERFLY VALVES

NIBCO butterfly valves, depending on size and pressure rating, are designed to mate with ASME B16.1, ASME B16.5, ASME B16.42 & ASME B16.47 series A flanges. Cast iron and steel flat-face flanges can be used with all NIBCO butterfly valves however steel raised-face flanges should not be used with cast grey iron lug style butterfly valves (NIBCO LC2000 and N200 series). While flange standards specify flange OD, thickness, bolt size, bolt circle diameter, and number of bolts, they may not specify flange opening ID. Care must be used when selecting mating components for use with NIBCO lug and wafer style butterfly valves. **The internal diameter of flanges, fittings, and pipe must be compatible with the butterfly valve for proper seal and operation.** When in the open position, the disc extends outward from the valve body. The internal diameter of connecting components must be large enough allowing clearance for the disc to fully open. The below disc clearances are in accordance with Butterfly Valve Standard MSS SP-67, Table A1.

NIBCO 2" thru 48" size butterfly valves have an integral rubber face that seals to the attaching flange, therefore a separate gasket is not necessary and should not be used. The flange inside diameter must not be too large or it will not mate properly with the seal. See below for minimum and maximum inside diameters of connecting piping/flanges to assure proper seal and operation of butterfly valves. Verify the inside diameter and clearance dimensions of all components connecting directly to a butterfly valve.

LD/WD/LC/WC1000/2000/3000/5000 SERIES

VALVE SIZE	MINIMUM PIPE/FLANGE ID FOR DISC CLEARANCE	MAXIMUM FLANGE/PIPE ID FOR PROPER SEAL
2"	2.00"	2.49"
2 1/2"	2.37"	2.86"
3"	2.67"	3.43"
4"	3.69"	4.55"

Butterfly Valve Technical Information

Valve Installation Procedure - For Lug & Wafer Style Rubber Seated Butterfly Valves LD/WD 1000/2000/3000/7000 and N150/N200 Series

Always position the connecting pipe flanges accurately in-line, allowing sufficient space between the flanges for the valve. Make sure the pipe flange faces are clean of any foreign materials such as scale, metal savings, welding slag, oils, grease, or dirt. Valves should be installed with the disc in the closed position to prevent damage to sealing surfaces. Do not apply any lubricants to the seat faces as this may damage the rubber. For LUG STYLE VALVES – Extra care should be used when installing valves with raised face flanges. Over-tightening of bolts can result in broken lugs.

- Carefully insert the valve between the flanges.
- Line-up, center, and secure the valve between flanges using desired bolts or studs as shown in Table 1 below. DO NOT TIGHTEN BOLTS AT THIS TIME.
- Carefully fully open the valve to assure free unobstructed disc movement. Disc interference may result when valves are installed in pipelines having smaller than normal inside diameters, such as heavy wall pipe, plastic-lined pipe, as-cast flanges, or reducing flanges. Interference can also occur when connecting directly to a swing check or silent check. Suitable corrective measures must be taken to remove these obstructions, such as taper boring the pipe/flange, installing a spacer or spool piece.
- After proper operation is verified, tighten bolts to the MINIMUM recommended bolt torques as shown in Table 2 below. NOTE that the torques are different for lubricated and non-lubricated bolts.
- A multi-stepped process utilizing the cross-over pattern should be used to draw the flanges against the valve from both sides of the valve at the same rate, ensuring the rubber seal face surfaces are compressed evenly. See Drawing below. This should be followed by 2 sets of Chase patterns, alternating from one side of the valve to the other.
- Refer to ASME PCC-1 GUIDELINES FOR PRESSURE BOUNDARY BOLTED FLANGE JOINT ASSEMBLY for bolt tightening methodology.
- Pressurize piping to valve and inspect for leakage. If leakage is observed, tighten bolts using cross-over pattern, increasing torque until leakage stops. All bolts must be tightened to the same torque. DO NOT EXCEED MAXIMUM TORQUES shown in Table 2.
- Recommended torques are made without warranty. Installer must verify proper strength bolts for application.

Caution

- Class 250 cast iron and Class 300 steel flanges **cannot** be used with these valves.
- Rubber faces of mechanical flanges are **not** recommended.
- Rubber seated butterfly valves are **not recommended** for steam service.
- Valves should **not** be assembled to flanges and then welded in to the piping system.
- Do not install valves with EPDM seats in compressed air lines.
- Lever-lock handles are **not** recommended for 8" and larger valves due to torque loads.

Butterfly Valve Technical Information

Gear Operator Installation and Handwheel Positioning

Tools Required		
Fire Protection (UL/FM)	2" — 8"	9/16" hex wrench & 1/8" hex allen wrench
	10" — 12"	3/4" hex wrench and 1/8" hex allen wrench
Commercial	2" — 8"	9/16" hex wrench
	10" — 14"	3/4" hex wrench
	16" — 18"	1 1/8" hex wrench

INSTALLATION

1. Install handwheel (1) onto gear operator shaft and secure with pin (2).
(If not already attached) See Fig. 1.
2. Turn the handwheel (1) clockwise until in full SHUT position.
3. Remove 2 screws holding pointer cover plate to center of gear operator to expose bore. Retain pointer cover plate and screws for reinstallation later.
4. Assure valve is in full SHUT position, turn valve stem (5) to close disc if necessary.
5. Assure both mounting base of gear operator (3) and valve top flange (6) are clean and dry.
6. Determine desired handwheel position in reference to the piping system and compare with Fig. 2. Basically there are 2 mounting positions for the gear operator onto the valve and the valve can be mounted in either direction into the piping system. This will allow handwheel to be positioned in any of the 4 Quadrants as shown in Fig. 2. Note that 10" and 12" size commercial valves only allow for handwheel positioning in Quadrants 1 and 2.
- 7a. Gear operators **with** adapter bushing
 - Insert adapter bushing (4) into gear operator (3) bore aligning bushing key with desired keyway. Keyway selection will determine handwheel orientation position.
 - Align adapter bushing (4) bore with valve stem (5) and slide gear operator assembly onto valve stem (5) until seated with valve top flange.
- 7b. Gear operators **without** adapter bushing
 - Align gear operator (3) bore with valve stem (5) and align with desired keyway. Keyway selection will determine handwheel orientation position.
 - Slide gear operator assembly onto valve stem (5) until seated with valve top flange.
8. Secure gear operator (3) to valve top flange (6) using supplied* fasteners (7 & 8).
9. Reinstall pointer cover plate onto gear operator that you removed in step 3 above. Arrow should be aligned to indicate SHUT position.
10. Rotate handwheel from full SHUT to full OPEN positions several times to assure proper operation.
11. Proceed with valve installation into piping system.

*A minimum of two fasteners is required, installed in opposite diagonal corners.
UL/FM valves require four fasteners.

Fig. 1

Fig. 2

Note - Connection of gear operator to valve stem varies depending on gear operator model, size and style. The adapter bushing and key may be different from illustration shown. UL/FM Valves require four fasteners.

Butterfly Valve Technical Information

Resilient Liner Materials

EPDM – EPDM is a terpolymer elastomer made from ethylene-propylene diene monomer. EPDM has good abrasion and tear resistance and offers excellent chemical resistance to a variety of acids and alkalines. It is susceptible to attack by oils and is not recommended for applications involving petroleum oils, strong acids, or strong alkalines. EPDM should not be used on compressed air lines. It has exceptionally good weather aging and ozone resistance. It is fairly good in ketones and alcohols.

BUNA-N (Nitrile) (NBR) – Buna-N is a general purpose oil resistant polymer known as nitrile rubber. Nitrile is a copolymer of butadiene and acrylonitrile. Buna-N has good solvent, oil, water and hydraulic fluid resistance. It displays good compression set, abrasion resistance and tensile strength. Buna-N should not be used in highly polar solvents such as acetone and methyl ethyl ketone, nor should it be used in chlorinated hydrocarbons, ozone or nitro hydrocarbons. Some aviation fuels may not be compatible.

Fluoroelastomer (FKM) – Fluoroelastomers are inherently compatible with a broad spectrum of chemicals. Because of this extensive chemical compatibility which spans considerable concentration and temperature ranges, fluoroelastomers have gained wide acceptance as a material of construction for butterfly valve O-rings and seats. Fluoroelastomer can be used in most applications involving mineral acids, salt solutions, chlorinated hydrocarbons and petroleum oils. It is particularly good in hydrocarbon service.

FKM is not recommended for use in high temperature water.

Liner Temperature Ratings

Liner Material	Temperature
EPDM**	-20°F to + 250°F
Nitrile (Buna-N)	-20°F to + 180°F
Fluoroelastomer	-20°F to + 300°F

**EPDM is rated at 250°F intermittent service and 225°F continuous service.

NOTE – the NIBCO Chem-Guide® should be referenced for liner material compatibility for each application.

Proprietary compound formulas are used for each of the elastomers to provide the right combination of seat compression, abrasion resistance, and chemical resistance to match your application. Elastomeric seat materials are not suitable for steam service.

Butterfly Valve Technical Information

Metals Used in Valves & Fittings

Aluminum—A non-ferrous metal, very lightweight, approximately one-third as much as steel. Aluminum exhibits excellent atmospheric corrosion resistance, but can be very reactive with other metals. In valves, aluminum is mainly used as an exterior trim component such as a handwheel or identification tag.

Copper—Among the most important properties of wrought copper materials are their thermal and electrical conductivity, corrosion resistance, wear resistance, and ductility. Wrought copper performs well in high temperature applications and is easily joined by soldering or brazing. Wrought copper is exclusively used for fittings.

Bronze—One of the first alloys developed in the bronze age is generally accepted as the industry standard for pressure rated bronze valves and fittings. Bronze has a higher strength than pure copper, is easily cast, has improved machinability, and is very easily joined by soldering or brazing. Bronze is very resistant to pitting corrosion, with general resistance to most chemicals less than that of pure copper.

Silicon Bronze—Has the ductility of copper but much more strength. Silicon bronze has equal or greater corrosion resistance to that of copper. Commonly used as stem material in pressure-rated valves, silicon bronze has greater resistance to stress corrosion cracking than common brasses.

Aluminum Bronze—The most widely accepted disc material used in butterfly valves, aluminum bronze is heat treatable and has the strength of steel. Formation of an aluminum oxide layer on exposed surfaces makes this metal very corrosion resistant. Not recommended for high pH wet systems.

Brass—Generally good corrosion resistance. Susceptible to de-zincification in specific applications; excellent machinability. Primary uses for wrought brass are for ball valve stems and balls, and iron valve stems. A forging grade of brass is used in ball valve bodies and end pieces.

Gray Iron—An alloy of iron, carbon and silicon; easily cast; good pressure tightness in the as-cast condition. Gray iron has excellent dampening properties and is easily machined. It is standard material for bodies and bonnets of Class 125 and 250 iron body valves. Gray iron has corrosion resistance that is improved over steel in certain environments.

Ductile Iron—Has composition similar to gray iron. Special treatment modifies metallurgical structure which yields higher mechanical properties; some grades are heat treated to improve ductility. Ductile iron has the strength properties of steel using similar casting techniques to that of gray iron.

Carbon Steel—Very good mechanical properties; good resistance to stress corrosion and sulfides. Carbon steel has high and low temperature strength, is very tough and has excellent fatigue strength. Mainly used in gate, globe, and check valves for applications up to 850°F, and in one-, two-, and three-piece ball valves.

3% Nickel Iron—Improved corrosion resistance over gray and ductile iron. Higher temperature corrosion resistance and mechanical properties. Very resistant to oxidizing atmospheres.

Nickel-Plated Ductile Iron—Nickel coatings have received wide acceptance for use in chemical processing. These coatings have very high tensile strength, 50 to 225 ksi. To some extent, the hardness of a material is indicative of its resistance to abrasion and wear characteristics. Nickel plating is widely specified as a disc coating for butterfly valves.

400 Series Stainless Steel—An alloy of iron, carbon, and chromium. This stainless is normally magnetic due to its martensitic structure and iron-content. 400 series stainless steel is resistant to high temperature oxidation and has improved physical and mechanical properties over carbon steel. Most 400 series stainless steels are heat-treatable. The most common applications in valves are, for stem material in butterfly valves, and backseat bushings and wedges in cast steel valves.

316 Stainless Steel—An alloy of iron, carbon, nickel, and chromium. A non-magnetic stainless steel with more ductility than 400SS. Austenitic in structure, 316 stainless steel has very good corrosion resistance to a wide range of environments, is not susceptible to stress corrosion cracking and is not affected by heat treatment. Most common uses in valves are: stem, body and ball materials.

17-4 PH Stainless Steel*—Is a martensitic precipitation/age hardening stainless steel offering high strength and hardness. 17.4 PH withstands corrosive attack better than any of the 400 series stainless steels and in most conditions its corrosion resistance closely approaches that of 300 series stainless steel. 17.4 PH is primarily used as a stem material for butterfly and ball valves.

Alloy 20Cb-3*—This alloy has higher amounts of nickel and chromium than 300 series stainless steel and with the addition of columbium, this alloy retards stress corrosion cracking and has improved resistance to sulfuric acid. Alloy 20 finds wide use in all phases of chemical processing. Commonly used as interior trim on butterfly valves.

Monel*—Is a nickel-copper alloy used primarily as interior trim on butterfly and ball valves. One of the most specified materials for corrosion resistance to sea and salt water. Monel is also very resistant to strong caustic solutions.

Stellite*—Cobalt base alloy, one of the best all-purpose hard facing alloys. Very resistant to heat, abrasion, corrosion, impact, galling, oxidation, thermal shock and erosion. Stellite takes a high polish and is used in steel valve seat rings. Normally applied with transfer plasma-arc; Stellite hardness is not affected by heat treatment.

Hastelloy C*—A high nickel-chromium molybdenum alloy which has outstanding resistance to a wide variety of chemical process environments including strong oxidizers such as wet chlorine, chlorine gas, and ferric chloride. Hastelloy C is also resistant to nitric, hydrochloric, and sulfuric acids at moderate temperatures.

Note: See the NIBCO Chemical Resistance Guide for specific questions.

12	4,500	8,050

Note: Torque Data shown is for general service (clean water, ambient temperatures). For non-lubricating, high temperatures or aggressive media, consult Nibco Technical Service.

Butterfly Valve Torque Data

Torque is the rotary effort required to operate a valve. This turning force in a butterfly valve is determined by three factors. (1) Friction of the disc to seat for sealing (2) Bearing friction (3) Dynamic torque.

Breakaway Torque is the total of the torques resulting from bearing friction and seat/disc interference friction at a given pressure differential. This value is normally the highest required torque to operate a valve, and is used in sizing actuators. The values listed at the left are based on performance tests and include a safety factor. The torques listed are valid for water and lubricating fluids at ambient temperature. For dry and non-lubricating fluids, contact your NIBCO customer service representative.

Butterfly valves, sizes 8" and larger, when used on liquids, show a marked increase in dynamic torque which tends to close the valve. For this reason, gear operated or actuated valves are recommended.

Torque listed for EPDM. When calculating torques for Buna-N, or Fluoroelastomer multiply listed torque by 1.25. Consult factory for dry service valves.

FC/FD27*5/57*5 GD4765/4775 Torque Data (In. Lbs.)

Ball and/or Butterfly Valve Actuation Data Sheet

To actuate all valves it is necessary to provide certain data to assure proper sizing and prevent damage to the system. Please supply as much data as possible.

NIBCO recommends having the valve and actuators assembled and tested at the factory, rather than assembled in the field. Please indicate whether this inquiry is for an assembled and tested package or field assembly:

☐ **Assemble and test** ☐ **Field assembly**

I. Valve Information:

A. **Type:** Butterfly ☐ Ball ☐

B. **Fig. No.** _____ **Size** _____ **Qty.** _____

C. **Type of Fluid in Valve:** _____ **Inlet Pressure:** _____ **Is Fluid:** Dry ☐ Wet ☐

Differential Pressure: _____ System Velocity: _____

System GPM: _____ Temperature: _____

D. **Service and Modulating Service:** On/Off ☐ Throttled/Modulating ☐

II. Actuator Information:

A. **Electric:** Voltage: 115VAC ☐ 220VAC ☐ 12VDC ☐ 24VDC ☐

Time for 90° rotation cycle time* (open/close): 2 secs ☐ 4 secs ☐ 10 secs ☐ 12 secs ☐

13 secs ☐ 15 secs ☐ 30 secs ☐

*NIBCO recommends utilizing the longest cycle time available in order to reduce the incidence of hydraulic shock

Type Enclosure: NEMA 4 ☐ NEMA 7 ☐

Special Requirements: Brake ☐ Thermostat ☐

Heater and Thermostat ☐ Manual Override ☐

Extended Duty Motor ☐ Position Transmitter ☐

Extra SPDT Switches ☐

B. **Pneumatic:** Air supply to actuator: _____ PSI (Min. 40 psi, Max. 120 psi)

Actuator Type: Air-to-Air ☐

Air-to-Spring ☐ Failsafe: Open ☐ Closed ☐

Solenoid: NEMA 4/4x ☐ NEMA 7/9 ☐

Switch Box: If so: NEMA 4/4x ☐ NEMA 7/9 ☐

Type: SPDT ☐ DPDT ☐ (two each is standard)

Pneumatic Positioner: 3-15 ☐ 4-20 MA ☐

III. Special Notes:

Note: Not all configurations are available.

NEMA 4/4x enclosures are for use in non-hazardous/unclassified locations, indoors or outdoors.

NEMA 7 enclosures are for use in hazardous (classified) indoor locations as Class I, Division I, Group C or D as defined in NFPA 70.

NEMA 9 enclosures are for use in hazardous (classified) indoor locations as Class II, Division I, Groups E, F, or G.

NIBCO INC. 125% LIMITED WARRANTY

Applicable to NIBCO INC. Pressure Rated Metal Valves

NIBCO INC. warrants each NIBCO pressure rated metal valve to be free from defects in materials and workmanship under normal use and service for a period of five (5) years from date put into service.

In the event any defect occurs which the owner believes is covered by this warranty, the owner should immediately contact NIBCO Technical Services, either in writing or by telephone at 1.888.446.4226 or 1.574.295.3000. The owner will be instructed to return said product, at the owner's expense, to NIBCO INC., or an authorized representative for inspection. In the event said inspection discloses to the satisfaction of NIBCO INC. that said valve is defective, it will be replaced at the expense of NIBCO INC.. Replacements shall be shipped free of charge to the owner. In the event of the replacement of any valve, NIBCO INC. shall further pay the owner the greater of twenty-five (25%) percent of the price of the valve according to the published suggested list price schedule of NIBCO INC. in effect at the time of purchase, or ten (\$10.00) dollars, to apply on the cost of the installation of said replacement valve.

TO THE EXTENT PERMITTED BY LAW, THIS WARRANTY SPECIFICALLY EXCLUDES INCIDENTAL AND CONSEQUENTIAL DAMAGES OF EVERY TYPE AND DESCRIPTION RESULTING FROM ANY CLAIMED DEFECT IN MATERIAL OR WORKMANSHIP, INCLUDING BUT NOT LIMITED TO, PERSONAL INJURIES AND PROPERTY DAMAGES.

Some states or countries do not allow the exclusion or limitation of incidental or consequential damages so these limitations may not apply to you.

TO THE EXTENT PERMITTED BY LAW, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE LIMITED IN DURATION.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state and country to country.

How to Order

State quantity, figure number and size for each valve you wish to order. See individual valve catalog pages for specific or special product designations.

HOW MANY TO ORDER

NIBCO® valves are decimal packed for your convenience in handling, shipping and stock-keeping. Number in master carton varies with item.

POLICY ON RETURNS TO FACTORY

NO NIBCO valves are to be returned without prior written agreement. Transportation must be prepaid. A 20% charge will be made to cover cost of rehandling and reinspection.

TECHNICAL ASSISTANCE

Engineers, contractors, wholesalers or manufacturers may obtain special or technical assistance from any factory representative of NIBCO. Write, fax or phone.

globally connecting you at all levels

It's a new age of business, and a new way at NIBCO. From Elkhart, Indiana to Lodz, Poland, and points beyond, our company has integrated manufacturing, distribution, and networked communications to provide a seamless source of information and service, 24 hours a day, 7 days a week. But this integration hasn't happened overnight. It's been part of a long-term strategic process that has pushed us to reconsider every aspect of our business. The result? We're a vertically integrated manufacturer with the products and systems in place to deliver low cost and high quality. NIBCO products are manufactured under a Quality Management System conforming to the current revision of ISO-9001 International Standards. We know the flow control industry is only going to get more demanding, and we are more than ready. We will continue to lead. That's what NIBCO is all about.

VALVES

Pressure-rated bronze, iron and alloy-iron gate, globe and check valves • Pressure-rated bronze ball valves • Boiler specialty valves • Commercial and industrial butterfly valves • Lined butterfly valves • Circuit balancing valves and kits • Carbon and stainless steel ball valves • ANSI flanged steel ball valves • Lined ball valves • Pneumatic and electric actuators and controls • Grooved ball and butterfly valves • High performance butterfly valves • UL/FM fire protection valves • MSS specification valves • Bronze specialty valves • Low pressure gate, globe, check and ball valves • Frostproof sillcocks • Quarter-turn supply stops • Quarter-turn low pressure valves • PVC and CPVC plumbing and industrial ball valves • Bronze and iron y-strainers • Sample valves • Sanitary valves • Lead-free valves • Hydronic valves • Labor saving valves • Manifold systems • Water temperature control valves • System quality valves • Press x PEX transition valves

FITTINGS

Wrot and cast copper pressure and drainage fittings • Cast copper alloy flanges • Powder coated steel companion flanges • Wrot and cast press fittings • ABS and PVC DWV fittings • Schedule 40 PVC pressure fittings • CPVC CTS fittings • CPVC CTS-to-metal transition fittings • Schedule 80 PVC and CPVC systems • Lead-free fittings • Press x PEX transition fittings • Cast bronze push fittings

LEAD-FREE: Weighted average lead content $\leq 0.25\%$

FLEXIBLE PIPING SYSTEMS

PE-RT and PEX tubing for potable and radiant applications • Insulated tubing • Risers • Ice maker tubing • Silicon Performance Bronze® fittings • Poly alloy fittings • Home Run Manifold® • Radiant heat manifolds • Ball valves and supply stops • Connections, tools and accessories • Radiant heat controls and panels

INDUSTRIAL PLASTICS

PVC and Corzan® CPVC schedule 80 fittings, true union ball and ball check valves, butterfly valves, and specialty valves • Polypropylene and Kynar® PVDF schedule 80 pipe, fittings, and true union ball and ball check valves • Pneumatic and electric actuation systems

Corzan® CPVC is a registered trademark of Lubrizol Advanced Materials.
Kynar® is a registered trademark of Arkema Inc.
