REESE® combines this with solid, all-welded construction for maximum performance and safety under the toughest conditions. The E-Coat base with black powder coat finish keeps your hitch looking good and resists corrosion for many years of service.

- New applications are engineering and released throughout the year, visit www.REESEtowpower.com for the most up-to-date vehicle applications

When choosing a REESE® trailer hitch consider the following questions to keep in mind:

- How much combined weight (trailer and payload) will I need to carry?
- Is my truck or automobile rated to carry the combined weight I am considering?
- What style(s) will fit my vehicle?
- Which designs are engineered specifically for my vehicle?
- Is appearance a major consideration; what will the installed trailer hitch look like?
- How easy will it be to install on my vehicle?
- Will any vehicle modifications be necessary?

HITCH BALLS

SELECTING THE RIGHT HITCH BALL:

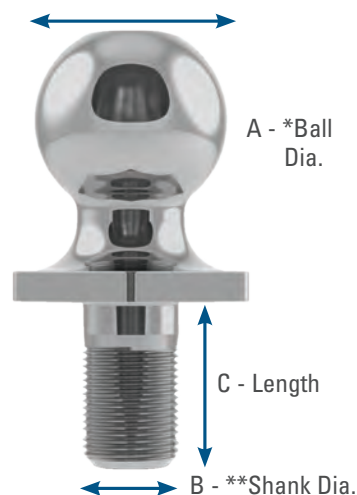

1. Always use the properly-rated hitch ball for your towing system
2. Your towing system's maximum weight rating is always equal to the lowest rated item in the system
3. Your hitching system cannot be upgraded to a rating higher than the maximum rating of your hitch

For example, a 3,500 lbs. ball on a 2,000 lbs. max trailer weight-rated hitch does not increase your towing capacity to 3,500 lbs. Your hitching system is still rated at 2,000 lbs.

- Conversely, a 2,000 lbs. ball on a 3,500 lbs. max trailer weight-rated hitch decreases your maximum towing capacity to 2,000 lbs
- The hitch ball diameter (A) must be the same diameter as the trailer coupler (1-7/8, 2 or 2-5/16 in.)
- The shank diameter (B) of the hitch ball should be the same as the hole diameter in the ball mount
- The shank length (C) should be long enough to allow at least two threads to be visible when the hitch ball is installed and the nut completely tightened

*The ball diameter required is stamped into the coupler handle or body

**During hitch ball installation, torque all 3/4 in. shank diameter balls to 160 ft. lbs., and 1 in. shank diameter balls to 250 ft. lbs., and 1-1/4 in. shank diameter balls to 450 ft. lbs.

ELECTRICAL WIRING

Trailers require electrical hookups that make towing safer for you and others on the road. In fact, while each state has its own laws and regulations governing everything from size limits to weight restrictions, the one thing they all have in common is that your trailer must be wired for taillights, brake lights, and turn signals. This is accomplished by connecting your trailer to your vehicle's electrical system.

Unfortunately, not all trailer electrical wiring is compatible with the wires of your car, truck, van, or SUV. Fortunately, REESE® and Tekonsha® manufactures a full-line of trailer electrical components for everything you need to get your trailer lights up and running for safe towing. We manufacture T-Connectors, wiring converters, wiring connectors, adapters, brake controllers, and more to make towing safe for you and the drivers around you. Best of all, our products install quickly and easily with simple do-it-yourself instructions.

1. Locate wiring position, see chart on page A-81

2. Unplug the tail light harness.

3. Route T-Connector to the tail light harness.

4. Plug the tail light into the T-Connector.

5. Re-secure the tail light and you're ready to tow!

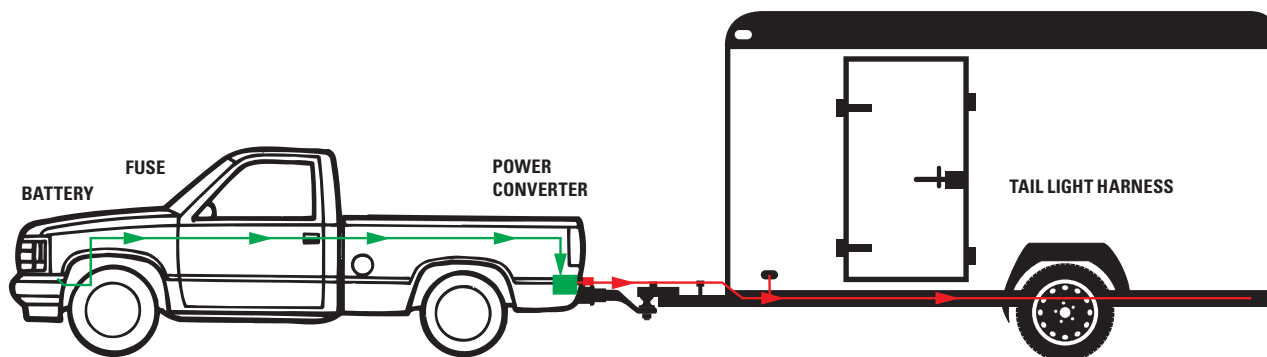

NOTE: Some vehicles may require grounding and/or direct connection to the battery.

POWERED TAIL LIGHT CONVERTERS ELIMINATE THE DRAIN ON YOUR VEHICLE'S ELECTRICAL SYSTEM

With a Power Module the additional power required to supply the trailer lights (represented by the red line) is supplied directly from the battery. Only a small amount of power is required from the fuse panel, turn signal switch, tail light harness and lamp out sensor, to signal when to illuminate the trailer lights.

Without a Power Module all the additional power required to supply the trailer lights pass through the vehicle's electrical system.

TRAILER LIGHT POWER MODULES

- Virtually eliminates additional electrical draw on the vehicle's tail light circuits
- Ensures maximum trailer light brightness
- Powers the trailer's stop, turn, tail and running lights without overloading vehicle electrical systems
- Compatible with:
 - 2-Wire and 3-Wire systems
 - Multiplex
 - PWM
 - LED tail lights

IDENTIFYING THE NEED FOR CONVERTER

- Today's vehicles have light gauge wire
- Computerized vehicle sensors monitor electrical current draw
- Without ModuLite® the sensors may give false readings
- Adding additional towing lights without converter may overload the system
- System problems and failure may occur without converter

HOW IT WORKS

- Converter connects directly to vehicle's battery and powers the towing lights
- Converter provides from 2.1 to 16 amps of power per circuit to the trailer lights, depending on the unit

INSTALLATION

Converter power modules typically install in 30 to 45 minutes depending on the ease of routing the power supply wire from the battery to the rear of the vehicle.

WHEN YOU NEED CONVERTER

- Trailer has more than one light assembly per side and is equipped with multiple clearance or running lights
- If the tow vehicle may tow a variety of different trailers
- Vehicle is equipped with lamp out sensors or other electronic devices that could be damaged by voltage fluctuations
- Owners manuals caution against adding additional loads to electrical circuits

BRAKE CONTROLS

For decades, Tekonsha® has designed and manufactured brake controllers to fit your every need, helping you to stop your trailer and keep your family and cargo safe on the road. Brake controllers are a necessary component for every towing system with electric trailer brakes which is why Tekonsha® offers several brake controller options with an array of different features.

Choose from time-delayed controllers that activate the trailer brakes at a predetermined time and intensity once the tow vehicle's brakes are applied, or proportional controllers that activate the trailer brakes at the same time and intensity as the tow vehicle's brakes.

Smooth, reliable stopping at any speed makes Tekonsha® brake controllers the best in class and most popular on the market. No matter what you are towing, Tekonsha® will help you brake with confidence. Life's a Journey. Stop Often.

TRAILER LIGHTING

For decades, REESE® has served as a trusted partner to commercial truck and light-duty trailer manufacturers and their respective aftermarkets. We manufacture incandescent and LED trailer lighting products that provide an extensive variety of lighting options for agricultural, industrial, recreational, and utility trailers.

While each state has its own set of towing laws and regulations from size limits to weight restrictions, the one thing they all have in common is that your trailer must be wired for taillights, brake lights and turn signals. REESE® manufactures every type of lighting you need to tow safely: stop/turn/taillights, clearance lights, utility and back-up lights, reflectors, lighted hitch covers, tailgate lights, and license plate lights. You can also rest easy knowing that all of our lighting products comply with Department of Transportation requirements.
