CATEGORY DESCRIPTIONS

WOOD

Trim Screws -

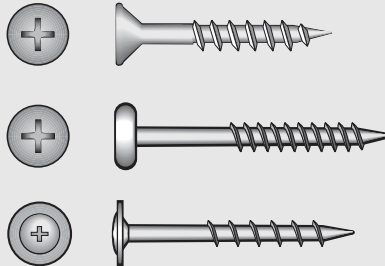

extra small head design countersinks and hides for a finished look. Use for casement and baseboard moldings, trim, cabinets, and anywhere finishing nails are used.

Available in three styles: Sharp Point, Drill Point, and Stainless Steel. Stainless Trim Screws are perfect for poly-composite wood working.

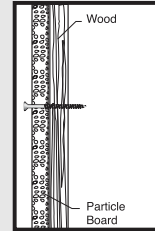

Cabinet Screws -

can be used for virtually any interior wood to wood fastening job such as the installation of cabinets or shelves.

All Purpose Screws -

for interior applications. Zinc & Yellow Dichromate finish blends with wood for an attractive appearance. Not recommended for treated wood. Available in Phillips and Dual Torq™ Drives.

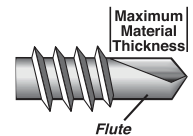

METAL

General Rule for Selecting the Correct Drill Point for Your Application

Length of Drill Point or Flute = Maximum Material Thickness

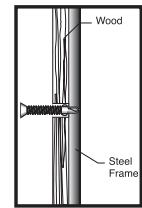

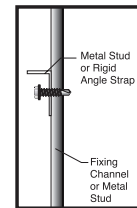

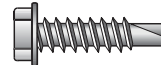

Drilling of entire metal thickness must be finished before threads engage into steel. If the threads engage before drilling operation is complete, the point will grind off due to excessive driving force. Total thickness to be drilled includes multiple sheets, insulation and "empty" space between materials to be fastened.

#2 POINT: up to .110"
#3 POINT: up to .220"
#4 POINT: up to .250"

Self Drilling Screws — designed for power driving wood or metal to metal without drilling a pilot hole. The Drill Point drills it's own hole, taps mating threads and fastens firmly in one operation. Drill Screws penetrate 18 gauge steel or greater. Drill screws are available in the following styles: Pan Head, Hex Washer Head, Flat Head, Wafer Head, Framing and Lath Screws.

All Flat Head Screws and a select size of Wafer Head Drill Screw feature wood piercing wings. The wings bore a hole in wood, preventing thread engagement during drilling, the wings break off when they hit steel.

Self Piercing Screws — designed for use in thin sections of metal, 20 gauge or less. The point "punctures" through the material, allowing the threads to protrude through the metal, reducing the possibility of "strip-out." Self Piercing Screws are available in the following forms: Hex Washer Head, Framing and Lath Screws, Self Piercing Sheeters (Polebarn) and Stovepipe/Gutter Assembly Screws.

DRYWALL

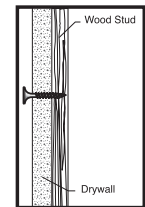

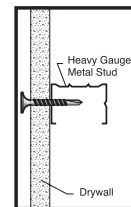

Drywall Screws — designed for interior construction jobs such as fastening wallboard, cabinets, hardwood, softwood, plywood, etc. to wood or metal. Available in:

Fine Thread - for fastening drywall to wood or 20 gauge or less metal, and with a self-drilling point for drywall to heavy gauge metal applications.

Coarse Thread - for drywall to wood applications.

Smart Thread - deliver a new drywall screw innovation that provides you with a single screw for use in both wood and metal studs.

Hi-Lo Thread - pattern allows for a steady drive and torque reduction when installing. Used to fasten drywall to wood or metal & the sharp tip is ideal for piercing sturdy materials.

Cement Board Screws — designed for fastening cement-type boards or any dense sheathings to wood or metal studs. Epoxy coating provides excellent corrosion resistance. Large wafer head with ribs provides quality countersinking and fastens the board firmly.

WOODWORKING TIPS

Understanding the Term "Extractive Bleeding"

Cedar and Redwood contain high levels of water soluble tannins that help give the wood their natural decay resistant qualities. Tannins become active and bleed to the wood surface when the surface has been penetrated or if there has been a drastic change in weather conditions. This is called extractive bleeding. When this occurs, tannins can cause visible staining if they contact bare steel, galvanized steel, or finishes such as latex stains or paints at the wood surface where the bleeding originates. Extractive bleeding cannot be prevented or controlled. The use of Stainless Steel Deck Screws greatly reduces the risk of staining. These fasteners prevent extractive bleeding through the use of corrosion resistant materials and finishes.
