Valve Positioners and Accessories

A valve positioner is a device that adjusts the valve actuator's position based on a control signal and are generally used in control applications because of their precision.

Valve positioners are usually mounted on the yolk or top casing of a pneumatic actuator for linear control valves, or near the end of the shaft for rotary control valves. To allow the valve's position to be compared with the position requested by the controller, the positioner can be connected mechanically to the valve stem or valve shaft or detect the movement by noncontact sensing technology. When a control signal differs from the valve actuator's position, the valve positioner changes the pilot pressure to move the actuator until the correct position is reached.

Benefits of using a valve positioner on rotary or linear control valves include:

- Accurately control and fast response to process a valve
- Control with minimized friction, dead-band, and hysteresis
- Auto-Tune and Auto-Calibrate through simple and fast setup and configuration
- Overcome seating frictions
- Negate flow-induced reactions to higher pressure drops and compensates for internal force imbalances
- Allow the use various valve characteristics

Pneumatic positioners receive pneumatic signals (usually 3-15 psig). The positioner then supplies the valve actuator with the correct air pressure to move the valve to the required position. Pneumatic positioners are intrinsically safe and can provide a large amount of force to close a valve.

Electro-pneumatic positioners convert current control signals to equivalent pneumatic signals. It uses a mix of both electricity and air, as implied by the name.

Digital or "SMART" positioners use a microprocessor to position the valve actuator while monitoring and recording data. They function very similarly to an electro-pneumatic analogue-type positioners, except the electronic signal conversion is digital rather than analogue. Smart positioners are very accurate, use less air and allow for online digital diagnostics.

YTC Positioner technology is based on over 20 years of experience. YTC Positioners and accessories have global recognition for their quality and reliability across all industries and all types of environments.
